CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co.

CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability is desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B or Q are generally used for experimental purpose where very high sensitivities are required; Class C or R mostly for motion picture equipment; Class D for relay work, etc.

CETRON RED SENSITIVE PHOTOTUBES

CETRON red sensitive phototubes are available in three sensitivity classes, A/B, C and D. The CETRON gas-filled red sensitive tubes comprise the most complete line of phototubes designed for sound reproduction. For complete engineering specifications, write for our PC 8/9.

CETRON BLUE SENSITIVE PHOTOTUBES

CETRON blue sensitive phototubes are available in two sensitivity classes, Q and R. The gas-filled CETRON blue sensitive tubes comprise a most complete line for sound reproduction work from dye recorded film. For complete engineering specifications, write for our PC 8/9.

CETRON LEAD SULFIDE PHOTOCELLS

CETRON lead sulfide photo conductive cells are made in a variety of miniature types. They are also available in a variety of sensitive areas and resistances. CETRON lead sulfied photocells are available in three sensitivity classes, A, C and D. For complete engineering specifications, write for our lead sulfide literature.

Continental Electric also manufactures a complete line of special purpose photocells, such as the CE-5, CE-7, CE-8, CE-10, CE-12, CE-15, CE-18, CE-26, etc. We will be happy to work with you on design and development problems, also on any special phototubes your application may require. Full data, price, etc. on special phototubes will be forthcoming upon request.

This is Britain's famous power amplifying tube . . . for years the favorite tube of experimenters and research laboratories; acknowledged in every country of the world to be the finest tetrode ever made. It is currently used in the Leak, Williamson, Radio Craftsmen and other fine amplifiers.

The KT66 is a versatile power tetrode with a number of useful applications. It may be used in the output stage of an audio-frequency power amplifier, either tetrode-connected for maximum sensitivity and power output or triode-connected for high quality working. In transmitting circuits using frequencies up to 30 Mc/s it may also be used as an oscillator or as a radio frequency amplifier.

A high slope, indirectly heated beam tetrode, the KT66 is suitable for either single or push-pull audio operation and may be employed as a beam tetrode with aligned grids. This alignment of the grids reduces losses in the screen and makes for the highest possible power conversion efficiency. With this system of construction high orders of power output may be obtained with a low screen dissipation, and the anode is designed to dissipate 25 watts continuously with a reliable life performance.

PRECAUTIONS IN USE

1. For the prevention of parasitic oscillation, always connect a resistance of 100/300 ohms close to the screen grid terminal of the valve holder. When used as a triode this resistance is connected between screen and anode. A control grid (stopper) resistance of 10,000 ohms to 50,000 ohms is also recommended.

2. The maximum permissible D.C. resistance from control grid to cathode is limited to 0.5 megohms for auto bias and 0.1 megohm for fixed bias application.

3. The heater-cathode voltage should not exceed 100 volts when used as a cathode-coupled driver valve, the heater and cathode should be joined and a separate heater supply used for each valve.

4. In push-pull applications showing a large change in anode current between the quiescent and full output conditions, a choke input smoothing circuit having a good regulation should be used. A badly regulated supply will lead to a fall in power output and/or excessive quiescent anode dissipation.

5. The use of a common auto-bias resistance is not recommended except in applications where the maximum anode dissipation is not attained under any condition of operation.

6. Ventilation: Adequate ventilation around the bulb should be provided.

The circuit information given does not imply any license under any patents which may be involved.

LEAK "POINT ONE" AMPLIFIER

Britain's Best!

Frequency Response 20-20,000 cycles, ± 0.1 db

Harmonic Distortion: 0.1% at 1000 cycles; 10w

Intermodulation Distortion: 0.4%, 40 & 7000 c.p.s

A UNIQUE FEEDBACK CIRCUIT DEVELOPMENT AUDIBLY BETTER REPRODUCTION from records and radio

The new "Vari-Slope" pre-amplifier sets the pattern for future high-fidelity reproducing amplifiers. Variable-slope "electronic" low-pass filters operate on negative voltage feedback principles.
NO INDUCTORS ("CHOKES") ARE USED and all their disadvantages are completely eliminated.

REMOTE CONTROL "VARI-SLOPE" PRE-AMPLIFIER

For use only with Leak Amplifiers

THE PROBLEM: When there are defects in radio transmissions and in records, the most satisfying results can be obtained when the high-frequency response of the reproducing amplifier is restricted.

The requirement is for a very flexible system which will vary not only the frequency at which the response begins to fall but also the RATE at which the response falls off. Conventional "low-pass" choke-capacitor filters, even when properly designed and constructed, introduce considerable distortion on transients. This transient distortion is very real: it can be predicted from theory, demonstrated by oscilloscope, and most importantly, it is audible, particularly with steep slopes of attenuation.

THE SOLUTION to the problem is the elimination of all choke-coils, and this has been achieved by using modified twin-T resistor-capacitor networks in negative-feedback loops. We have evolved an ideal form of continuously-variable slope control which increases the feedback as the slope is made steeper. The advantages of the Leak electronic feed back method over conventional choke-coil filters are:

(a) Improved transient response characteristics and the consequent reduction of "ringing"

(b) Extremely low harmonic and intermodulation distortion due to the negative voltage feedback action

(c) No discontinuities in the rates of slope when the slope control is operated, and no change in signal level at frequencies below cut-off

(d) There are no chokes to give rise to magnetic hum

(e) Smaller size, lighter weight, greater uniformity in production

Leak Vari-Slope will operate from ANY known phone pick-up, crystal or magnetic, foreign or domestic; from ANY moving coil microphone; from ANY radio unit.

Equalization circuit: Proper equalization positions for LP records, Foreign or American recordings of all speeds.

Switching to Pick-Up, Microphone and Tuner, with automatic alteration of tone-control characteristics.

Controls: Input Selector; Bass Gain and Loss; Treble Gain and Loss; Volume with AC on-off switch to permit switching of remotely placed power amplifier, Vari-Slope control.

Output Impedance: 0-30,000 ohms at 20 kc.p.s.

Chassis: 10" x 3" x 2¾" high. Front panel: 10¾" x 3½".

TL/12 12W. TRIPLE LOOP POWER AMPLIFIER

All valves replaceable with Standard U.S. Tubes

The Leak Amplifier offers exceptional performance and reliability in a manner acceptable both to the amateur enthusiast and the professional communications engineer seeking the highest available standard of sound reproduction. It incorporates a Leak 3 stage triple loop feedback circuit, the main loop giving 26 db. feedback and covering the complete amplifier from input to output terminals. This results in the following major advantages:

In the TL/12 amplifier the hum and noise levels fall within −80 db and −72 db relative to 10 watts. This amount of power, as hum and noise, is inaudible from the most efficient loudspeakers. Notice particularly that the feedback is taken from the low side of the output transformer. Many other circuits show it to be taken from the anode side, which will result in higher hum levels than without feedback.

In this amplifier~~,~~ due to the magnitude of feedback, there can be no rise of voltage to cause "boom" in the loudspeaker at the frequency of brass resonance, and the capacity of a loudspeaker to reproduce transients, especially low-frequency transients, is astonishingly improved.

Push-pull triode output stage. 400 V. on Anodes. No. H.V. electrolytic smoothing or decoupling condensers. Impregnated transformers; tropically finished components. H.V. and L.V. supplies for pre-amp. and radio units. DISTORTION: 1/10 of 1% at 1000 c.p.s. and 10w. output: no significant increase at any other frequencies. HUM AND NOISE: minus 80 db. on 10w. FREQUENCY RESPONSE: ±0.1 db. from 20 c.p.s. to 20,000 c.p.s. SENSITIVITY: 160 mV. DAMPING FACTOR: 40, with negligible variation throughout power range. INPUT IMPEDANCE: 1 meg. OUTPUT IMPEDANCES: 2, 7-9, 15-20, and 28-36 ohms. STABILITY MARGINS: Gain, 10 db. ±3 db.; Phase, 20° ± 10°. DIMENSIONS: 12½" x 10" x 8¼" high.

ALSO AVAILABLE! TL/25 A-25 WATT MODEL, A MODIFICATION OF THE TL/12.

DISTORTION APPROXIMATELY 0.25% AT 1000 CYCLES FOR 20W. OUTPUT. GAIN AND FREQUENCY RESPONSE ARE APPROXIMATELY THE SAME AS THE TL/12.

12W and 25W Amplifier sold with or without pre-amplifier. Preamplifier is not sold separately.

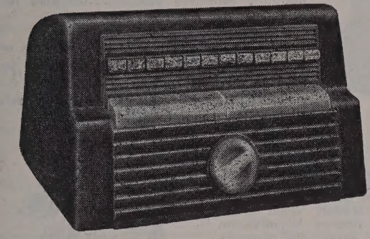
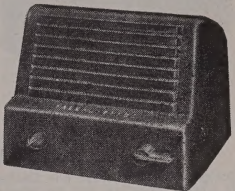
FOR INDUSTRY • STORES • OFFICES • HOMES

Known wherever inter-communication is used as the World's finest system, TALK-A-PHONE is designed, developed, and precision-engineered by the leader in its field, with more than a quarter-century experience in electronics. TALK-A-PHONE stations are designed to withstand continuous day and night use; and are built to give you years of dependable service. The Armed Forces; Governmental Agencies; America's giant industrial firms, with highly complex and elaborate intercom needs depend on TALK-A-PHONE.





ONE MODEL DOES EVERYTHING

TALK-A-PHONE's patented, exclusive **"DYNASONIC"** features gives you one model that "Does Everything." The same unit can be used for every type of application, whether it be as all Master Stations, or a Master and Staff Stations, or a number of Masters inter-mixed with Staff Stations. The Master Stations may talk with any other Master in the system as well as with all Staff Stations. Six, twelve, twenty and thirty capacity Master Stations can be used within the same system. The Staff Station may answer Master Stations and originate calls to one, two or six Master Stations, depending on its capacity. Staff Stations converse with Master Stations only. Staff Stations are not connected to electrical outlet.

Through its **"DIFFERENTIAL STAFF"** feature, TALK-A-PHONE permits any Staff Station to be used as either "Private" or "Non-Private", and also permits some Staff Stations to be "Private" and others "Non-Private" in the same system. "Private" Staff Stations have complete privacy, and no other station can "listen-in". Persons at "Non-Private" Staff Stations can answer from a distance up to 50 feet from the unit without leaving work. All Master and Staff Stations are assured of privacy, except where by choice, Staff Stations are designated as "Non-Private", in which case the Master Station can "listen-in" on the "Non-Private" Staff Stations.

REDI-POWER . . . the simple means of having additional output without a separate power booster . . . has now been further developed to furnish a maximum of 20 watts. One or more **REDI-POWER** Masters can be combined with regular "Chief" Masters and Staff Stations in the same system. Use to call a number of stations simultaneously with sufficient volume, or to call very noisy locations singly. Has all the operational features of a regular "Chief" Master unit with the additional feature of ***built-in*** extra power for use when needed. Available in 12 and 20 station capacity.

BEAUTIFULLY STYLED: The Bakelite walnut cabinet of the "CHIEF FORTY-NINER" is unsurpassed in simplicity of design and appearance.

TRANSLUCENT LIGHTING further enhances its beauty as well as indicating whether the unit is "on" or "off."

UNI-TRANS: Gives you "DICTATION CONTROL."

VOICE RANGE POWER: The powerful, rugged amplifier gives you amazing, brilliant "voice range" power. Stations may be up to 3000 feet apart.

DEPENDABILITY: PROVED IN BILLIONS OF HOURS OF ACTUAL USE.

PRIVACY EARPHONE: Optional equipment on Master Stations. Provides listening privacy; and conversation with other Masters without continuous operation of touch bar.

CRADLE PHONE: Optional equipment to provide completely private conversations.

BUSY SIGNAL: Talk-A-Phone "Busy Signal" functions as a visual indication that the Master Station being called is busy. Can be ordered as optional feature with any "Chief" Master Station.

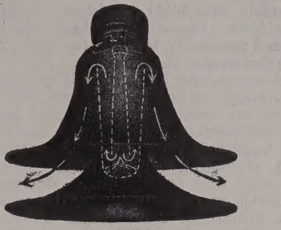
RE-ENTRANT TRUMPETS
RADIAL HORNS and SPEAKERS
PM DRIVER UNITS

Re-Entrant Trumpets, Radial Horns and Speakers

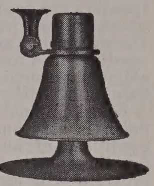
RE-35 RE-50 RE-60

RACON re-entrant horns and speakers are designed to deliver highly concentrated sound with great efficiency over long distances. This is due to true exponential design throughout and the elimination of all vibratory members and sound dissipating devices. The base and inside tone arms are husky aluminum castings and bell is a heavy gauge aluminum spinning. The RE-35, RE-50 and RE-60 incorporate reflectors made of patented **RACON ACOUSTIC MATERIAL** to prevent resonant effects. All models are supplied with "U"-bracket mounting (ratchet swivel type on request). Finish is in weatherproof hard baked gray hammertone. RE-60 & RE-50 recommended for maximum low frequency music reproduction. RE-35 and RE-25 best suited for incidental music and high speech intelligibility.

The SR-35R and SR-60R are weatherproof radial re-entrant horns designed to project sound over an area of 360 degrees. The centre reflectors are of patented **RACON ACOUSTIC MATERIAL** and the deflectors are aluminum spinnings covered with this same non-vibratory material. Standard "U" bracket supplied. Thread size is 1⅜″-18, permitting the use of any driver unit listed below. 1 7/16″-16 thread on request. The SR-60R is ideal for church tower sound installations and the SR-35R for incidental music and speech.



SR-35R SR-60R



SR-15R SR-12R

The SR-15R and SR-12R are rated at 20 and 10 watts respectively and are supplied complete with built-in 15 ohm* driver units. These models are intended primarily for speech in paging and "talk back" systems and are completely weatherproof. Supplied with cast swivel ratchet and wall bracket.

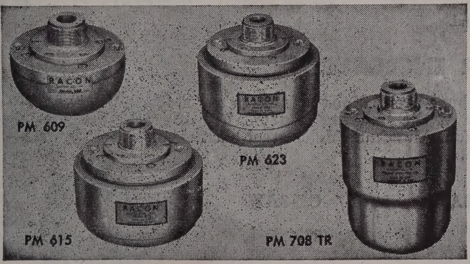
Waterproof Permanent Magnet Driver Units

The driver unit is the most important single element in a successful public address system. In these four new driver units, primary emphasis is on: high continuous power handling capacity with ample reserve for overload peaks up to 100%, maximum conversion efficiency, response ranges suitable for every type sound system, and waterproof construction.



These four units employ Alnico V magnets and Armco magnetic iron throughout. All soft steel parts are doubly plated to prevent corrosion. An automatic electromagnetic cut-out switch is used in the magnetizing process, assuring maximum flux density in the gap and high uniformity. Units are individually measured for flux density. Each unit is tested with special equipment for power handling capacity as well as a 350-volt ground test.

Long life plastic diaphragms and formers are supplied. Voice coil leads are non-fatiguing beryllium copper, insuring lifetime performance. All units are completely waterproof, yet permit ready replacement of diaphragm where needed.

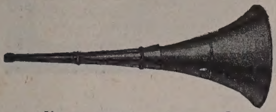
STRAIGHT EXPONENTIAL TRUMPETS



Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type because it lacks the attenuation inherent in all re-entrant horns. **"Stormproof"** Trumpets are made of non-vibratory RACON ACOUSTIC CLOTH. Weather-treated for indoor or outdoor use. **"All Aluminum"** Trumpets are made of heavy gauge aluminum spinnings with rolled beaded edge and cast aluminum throat sections. **"Unbreakable"** Trumpets are made of heavy gauge aluminum spinnings reinforced and damped with Patented **RACON ACOUSTIC MATERIAL.** Large sizes are useful for church chime systems, C-D systems, airports and stadiums, parks, playgrounds, music festivals, for both speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

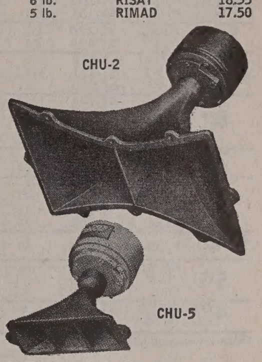
CAST ALUMINUM HORN TWEETERS



Response is essentially flat to 12,000 cycles, with excellent usable output to 15,000 cycles. Horn design permits wide angle distribution. Designed for a 1000 and 1500 cycle crossover to assure optimum cone response. These models must be used with a cross-over network. The networks listed below are recommended and when employed, the CHU-5 and CHU-2 may be used with amplifiers having an output rating to 25-30 watts.

NOTE: Instructions are packed with each tweeter, providing an easy method of home building a professional type 1000-cycle crossover network.

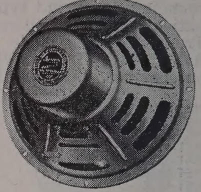
Standard Series speakers, although moderately priced, are exceptionally good in performance and are highly recommended for use in radio and television receivers, recorders, public address equipment, intercommunication systems and similar applications. Models listed on this page have been completely redesigned in every detail. Magnetic structures have been designed to achieve maximum gap energy, cones selected for uniformity of response, and all speakers are completely dust-proof. Models listed are standard fidelity response only. Standard Series speakers are finished in aluminum.



ALNICO 5 PM MODELS

These PM speakers embody the highly efficient Alnico 5 magnets which insure long life and highest efficiency. Because Alnico 5 magnets are many times more powerful, ounce for ounce, than their predecessors, speakers so equipped offer obvious advantages: lighter weight, for savings in shipping costs; and smaller size, for savings in space in cabinet installations.

JENSEN HYPEX PROJECTORS

VH-24
VH-20
VH-15

Because of the Hypex formula (Patent 2,338,262) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior to the usual "exponential" type horns. The Alnico 5 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. **Models VH-24, VH-20** and **VH-15** have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. **Model VH-91** has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

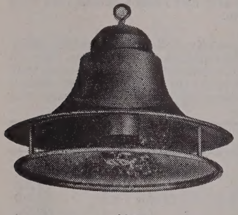
HYPEX "*Three-sixty*" PROJECTORS



VR-11

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula, made famous by JENSEN Hypex projectors, is incorporated in their design giving greatly improved acoustical performance. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. **Model VR-11** is recommended for speech reproduction while **Model VR-241**, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; **VR-241** uses same diaphragm as VH-24 and VH-20; **VR-11** uses same diaphragm as VH-15 and VH-91. **VR-241** is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

THE "HYPEX" HORN FORMULA

— *An Exclusive Jensen Feature*

"Hypex" comes from the mathematical term "hyperbolic exponential," which describes the important difference between Jensen projectors and those based on the simple exponential theory. Jensen research discovered a better, more efficient horn formula which maintains effective acoustic loading right down to acoustic cut-off and all Jensen Hypex* Projectors have this exclusive feature for better performance. For the facts on this development and a complete description of horn behavior, write for Technical Monograph No. 5, "Horn-Type Loudspeakers."

Price 25c.

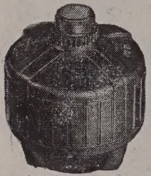
RELIABLE...RUGGED DRIVER UNITS

with these Exclusive Built-in Features

MODEL PA-30—Recommended for reproduction of chimes, carillons, organ music. Ideal for rental work, high efficiency, maximum distance penetration. Built-in transformer with various impedances and for 70 V. systems.

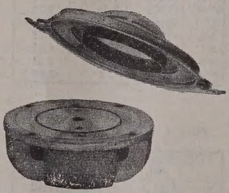
- W-shaped Alnico 5 magnet results in maximum efficiency by reducing reluctance losses and surface leakage.
- Built-in transformers provide installation flexibility to meet any impedance requirement.
- Bi-sectional mechanism with foolproof automatic "rim-centered" diaphragm voice coil assembly assures immunity to shock and vibration . . . facilitates field maintenance.
- Full selection to meet all power, frequency response, impedance and mechanical requirements.

MODEL SA-HF—Meets all PA and industrial requirements. For heavy noise areas, speech or quality music.



MODEL SA-30 — Completely die-cast aluminum housing makes it a "must" in hazardous locations or rough service. Built-in transformer with various impedances and for 70 V. systems.

BI-SECTIONAL MECHANISMS



Specially tapered, one-piece linen-base phenolic diaphragms are set in an *exclusive aluminum acoustical booster* which applies phase correction at the upper register of the spectrum. This assures exceptionally uniform overall frequency response, and enables the diaphragm/voice coil assembly to *automatically* center in the voice coil gap on the magnet top plate. This exclusive University "rim-centering" technique results in shock-proof permanent voice coil concentricity; means smaller magnetic gap for greater flux density and conversion efficiency.

MODEL MA-25 — Fills low cost requirements without compromising quality. Rugged, weatherproof. Highly efficient to 6000 cycles.

For Your Added Protection . . .

***There is more to University quality than meets the eye.* All metals used in the manufacture of University equipment are given a number of *special* treatments prior to and during fabrication to insure life-long protection against destructive elements which may be present in the environment, as well as to maintain the physical and acoustical properties for which they were originally selected. These treatments—plus the *baked* paint finish—serve as further protection against corrosion, and as further proof of UNIVERSITY superiority.**

ATLAS 'DR' WEATHERPROOF DOUBLE-REENTRANT PROJECTORS

Non-Resonant • Uniform Response • Sturdy • Stormproof Compact • Demountable

The modified exponential taper developed in Atlas projectors has proved most efficient for overall performance. All acoustical paths are clean and uniform. Reflex turns are smooth and flowing. These important features eliminate turbulence, frequency cancellation and resultant signal distortion. Ruggedly constructed of heavy castings, precision stampings, accurate die castings and uniform metal spinnings. All metal-to-metal surfaces insulated with non-vibratory material. Bell rim dampened and mechanically protected with formed rubber rim. All metals specially processed by chemical and electro-chemical means to impart complete weather-protection. Heavy "U" bracket mountings, securely fastened to main body casting of each model, do not fail even under extreme stress, strain or vibration. 1⅜"-18 thread. For greatest efficiency and low frequency response, the larger size horns are recommended. The smaller horns are excellent where space and cost limitations pertain.

500-D DIRECT DRIVE AMPLIFIER

FINEST AMPLIFIER BUILT—NO OUTPUT TRANSFORMER

- Frequency response ±¼ db 20-70,000 c.p.s.
- Full 20 watts of audio
- Distortion is less than ½ of one per cent
- Phase shift—less than 15° at 20 c.p.s.

(Above figures are a true picture at full output of 20 watts.)

Here's the first amplifier to successfully eliminate the output transformer. All distortion introduced by transformers is eliminated. Great clarity of tone is noticeable at once. Hum and noise are at a minimum. Frequency response is ±¼ db 20-70,000 c.p.s., achieved with far less phase shift than can be obtained with a transformer . . . especially on the low end. Matching Stephens Tru Sonic speakers with 500 ohm v.c. impedance designed as companion units for the 500 D Amplifier are shown on adjoining page.

RADAX COAXIAL SPEAKERS

SP8-B
SP12-B
SP12
SP15

Discovery of the *E-V RADAX* Principle provides an *economical* and *super-efficient* method of utilizing two disparate coaxially mounted cones to divide the audio spectrum . . . while both operate from only a single voice coil.

Built-in mechanical crossover from the low-frequency cone to the high-frequency propagator ("*Whizzer*") permits design of each cone for optimum response. This provides a true coaxial two-way speaker system that assures clean, sparkling wide-range reproduction.

Frames are extra sturdy. Both speaker cones are moisture inhibited.

Public Address Loudspeaker System

for perfect

VOICE PENETRATION AND FULL RANGE MUSICASTING

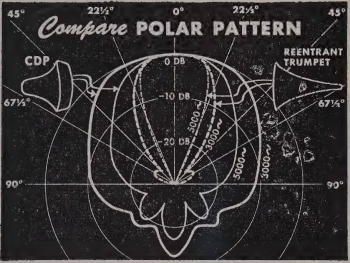
The CDP Compound Diffraction Projector* provides a loudspeaker system so advanced in concept—so efficient in performance—that there is no basis for comparison with conventional P.A. reentrant horns. The EV CDP works in the same manner as an optical slit. When the slit width is of a shorter dimension than the wave length of the sound it passes, the sound energy is highly dispersed in the direction of this short dimension. Polar response of the CDP is phenomenal.

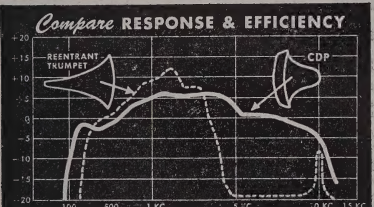
An increase in efficiency of three db over multi-cellular horns is achieved with better dispersion. There is no pinpointing effect since there are no cells to beam the sound path. Elimination of multiple throats at the driver mouth permits greater high-frequency efficiency as compared to multi-cellular horns. The direct path and optimum throat dimension of the CDP also gives these advantages over the reentrant horn. Greater transfer efficiency, smooth extended high-frequency response also result from this development.

The EV Model 848 CDP provides peak-free response ±5 db to 10,000 cps—delivers 2½ octaves more musical range than usual P.A. units of even larger size. Speech articulation index is at least 20% superior. Polar distribution pattern exceeds 120°. The EV Model 848 utilizes two coaxially mounted horns working from opposite sides of a single diaphragm. Each horn is designed for optimum reproduction within its own range. Low end response is augmented by 100 c.p.s. horn taper, which insures at least one-half octave added bass over that possible from larger conventional P.A. horns.

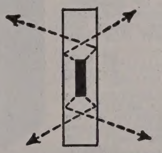
The CDP bell and diaphragm are fabricated of molded Fiberglass. Other parts are die-cast zinc and steel treated against corrosion. The voice coil is edgewise wound copper ribbon on a duralumin form. Edgewise winding puts 30% more conductor in the gap, raising the efficiency 20%. In EV tests the CDP driver has been subjected to months of continuous operation under 30 watts of power at 60 cycles AC without failure for any reason whatsoever. Should it become necessary, the diaphragm is easily replaced in a moment. Silver contacts eliminate the need for soldering operations.

The EV CDP, with its higher sensitivity and power handling on a basis of distributed signal, provides superior coverage of the listening area with fewer units and at far lower cost. The EV CDP unit is weather-proof, splash and blast proof, and virtually indestructible. It represents something so entirely new in Public Address efficiency and fidelity that it is indeed hard to believe such reproduction is possible.



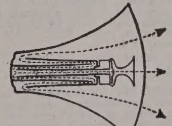


DIFFRACTION PRINCIPLE



Uses the new acoustic application of optical slit diffraction for perfected smooth sound dispersion virtually independent of frequency.

COAXIAL HORNS



CDP utilizes two coaxially mounted diffraction horns working from both sides of a single diaphragm. Each horn is designed for optimum air loading and reproduction within its own range.

ELECTRO-VOICE MODEL 848 COMPOUND DIFFRACTION PROJECTOR*

Conservatively rated at 25 watts. Nominal impedance is 16 ohms. The attractive neutral gray color is molded right into the bell material, which is impervious to acids, alkalies and most solvents. Hang up bracket has two mounting positions. Projector may be installed horizontally, or vertically for augmented dispersion. Dimensions at mouth: 10½" wide, 20½" high. Overall depth 20". Shipping weight 17 lbs.

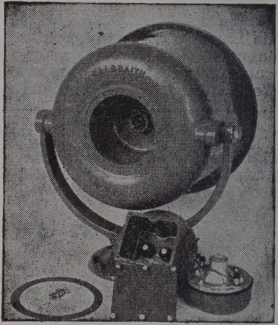
Galbraith Reproducers and Amplifiers, while designed primarily for installation aboard ship, are especially suitable for use on docks, in shipyards, and other locations where exposed to extremes of varying temperatures and difficult moisture conditions.

15″ HIGH POWERED MARINE REPRODUCER E-27, 544 Alt.-1



Approved by the U.S. Coast Guard (161,004) for installation on inspected merchant vessels when used with approved loudspeaker system. It is a double re-entrant type of horn approximately 15″ in diameter x 11″ in depth, consisting of bronze castings and brass spinnings. The high powered "Alnico V Plus" Driver unit is located within the base casting, held in position by the one piece, cast bronze, Junction Box with sealing flange. The Junction Box is drilled and tapped for ½″ I.P.S. stuffing gland. Hermetic sealed feed-through terminals prevent any entrance of moisture to the driver unit compartment. Spring type terminals on driver unit and in Junction Box permit easy connection.

The Adjustable Mounting Bracket, No. E-27, 546, allows easy adjustment for directing speaker to cover the proper area, and permits quick replacement of the Driver Unit when necessary.

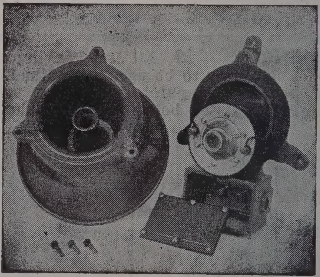
GALBRAITH ELECTRIC ANNOUNCES THE DEVELOPMENT OF A NEW COAST GUARD APPROVED 10″ MEDIUM POWER MARINE TYPE REPRODUCER



Approved by the U.S. Coast Guard (JJ/161,004) for installation on inspected merchant vessels when used with approved loudspeaker systems. This marine reproducer is a double re-entrant type of horn approximately 10″ in diameter and 8″ in depth. It is constructed of special salt water corrosion-resistant aluminum alloy castings and spinnings. All surfaces are alodine treated followed by zinc chromate primer and finished with a durable baked gray enamel. The high powered "Alnico V Plus" driver unit is located within a one-piece casting consisting of base plate and junction box and is held in position by the dome-shaped casting forming the horn proper. A neoprene gasket clamped between these two castings provides the seal necessary to exclude all moisture. This permits the speaker to be used in any location even on the exposed weather decks. The junction box is drilled and tapped for ½″ I.P.S. stuffing gland. Hermetic sealed feed-through leads prevent any entrance of moisture to the driver unit voice coil chamber. Spring type terminals on driver unit and in junction box permit easy connection.

This speaker is suitable for direct bulkhead mounting as its simple design permits quick replacement of the driver unit without removing the speaker from the bulkhead or disconnecting the ship's wiring.

NEW BUD METAL SPEAKER ENCLOSURES

Here, at last is a line of metal speaker enclosures that are outstanding in design and performance. They are handsomely finished in silver grey hammertone, provide lifetime durability and are acoustically perfect.

These metal speaker enclosures are ideal for many locations such as hospitals, auditoriums, schools, restaurants, factories, department stores, railroad stations, airports, out-door theatres and any other place where a speaker is used.

LOOK AT ALL THESE ADVANTAGES

- ACOUSTICALLY PERFECT because they are treated with a special sound-deadening compound to eliminate metallic resonant sounds.
- ALL-DIRECTIONAL MOUNTING permits adjustability of speaker in any vertical or horizontal position. Can be attached to wall or ceiling.
- LIFETIME DURABILITY since there is no danger of warping, cracking or splitting—which are hazards of wood speaker baffles.
- 2-WAY SOUND arises from bi-lateral feature which permits sound to come from both the front and back of the enclosure.
- FULL SIZE RANGE—Enclosures available to accommodate 4″, 5″, 5½″, 6″ 8″, 10″ and 12″ speakers.
- ECONOMY assured by our large-scale manufacturing operation. Prices are relatively low in comparison with advantages provided.

REAR SEAT SPEAKER GRILLE

To protect the speakers that are now being installed on the deck behind the rear seat of many automobiles, we have designed a beautiful metal grille. Designed to cover standard sizes of speakers used in this location. It is furnished with wire, selector switch and switch mounting bracket. The finish is in beautiful silver grey hammertone to harmonize with the car interior.

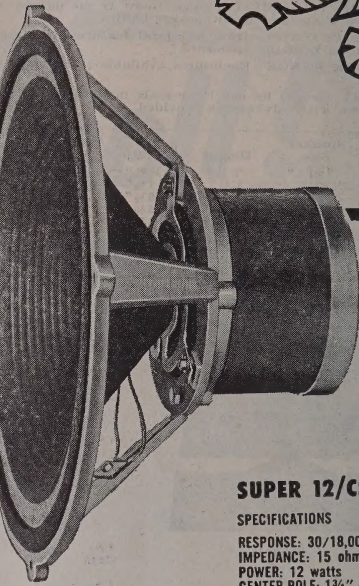
Britain's Finest Loudspeakers

Wharfedale

Despite their modest price, all Wharfedale Speakers are fitted with cast chassis resulting in greater rigidity, less resonance and better air loading. All models except the 8" Bronze have cloth suspension cones which improve transient response by adding dissipation to the edge of the cone, with reduced reflection of the flexural waves. This type of cone suspension also reduces the bass resonances of the speaker unit, resulting in a more level impedance curve and improves the transient or decay element. Such refined quality of reproduction is only available with Wharfedale cloth suspension.



Warmly received by quality enthusiasts, the Super 12/CS/AL has a remarkably level response between 30 and 18,000 cycles when adequately baffled. Cloth suspension and low cone resonance reduces transient distortion to an absolute minimum and eliminates irritating "boom" associated with stiffly suspended cones. Critical listeners will hear the true bass which is so seldom heard. Wharfedale's exclusive cone and carefully wound aluminum voice coil achieve amazingly clean highs, without introducing peaks in the upper middle register.

The high quality of this speaker is uniformly maintained in production since it does not rely on subsidiary diaphragm resonances, which can cause intermodulation distortion. The Super 12/CS/AL *has proved superior to many more expensive* combinations in general listening quality and pleasing sound.

The cloth suspended cone of the W10/CSB has truly remarkable ability to reach maximum quality at low levels. This speaker also makes an excellent tweeter in a two-way speaker system and maintains highs that are clean and brilliant without being penetrating.

R-J ENCLOSURES WILL OUTPERFORM ORDINARY ENCLOSURES MORE THAN THREE TIMES THEIR SIZE!

Hearing is believing! Now available for the first time, R-J Speaker Enclosures have established an entirely new trend in audio design with thrilling performance from any loudspeaker in a cabinet only slightly larger than the speaker itself. R-J Enclosures are simple, flexible, low in price, and particularly adaptable in rooms where space must be conserved. Up to now cumbersome, costly speaker enclosures have been tolerated because their size was considered essential for good bass performance. This inconvenience has now been effectively overcome by the R-J construction principle, which has received the approbation of thousands of critical listeners with outstanding results. Long before R-J Speaker Enclosures were commercially available, enthusiastic comments and inquiries were received from every part of the world, from home listeners, critics, and broadcast stations alike. Listeners were fascinated equally by the outstanding performance of R-J Enclosures and by their decorative possibilities.

The R-J Enclosure will permit the user to realize the full potential of any speaker with which it is used. Even the most inexpensive speakers will perform at their best in an R-J housing. With a well-designed speaker, an R-J Enclosure offers clean, smooth bass fundamentals, without peaks, down to low organ pedal notes. Distorting cabinet resonances are completely eliminated.

Remarkable though its bass performance may be, the R-J Enclosure is equally impressive in its unobstructed direct radiation of high frequencies. Excellent acoustic loading affords best reproduction of transients.

R-J Speaker Enclosures also offer the advantages of unusual versatility. Fine furniture construction is used throughout, suited in appearance to any room decor. Enclosures are expertly built of heavy, top-quality genuine Mahogany or Korina veneers, in fine, long lasting hand-rubbed dark or blonde finish. Special models are available with surfaces sanded but unfinished, to fit the shelves of bookcases and other similar installations. Cut-outs fit all standard loudspeakers, which may be installed quickly and simply without special tools.

SHURE CRYSTAL PHONOGRAPH PICKUPS AND NEEDLES

PHONOGRAPH PICKUPS

Like the popular Shure Cartridges, each Shure Phonograph Pickup has been designed to meet specific requirements. There is at least one model for each type of reproduction desired — standard (78 RPM), fine-groove (33⅓ and 45 RPM), or single-needle "All Purpose" and dual-needle "Turnover" for playing all types of records. Each tone arm is scientifically curved and balanced for faithful tracking, and designed to emphasize the best qualities of the cartridge with which it is equipped.

Minimizes mechanical loading of the cutter by disk material, thus increasing high frequency response, especially at small diameters.

Invaluable for microgroove, standard 33-1/3 and 45 r.p.m. speeds.

Available from stock for Fairchild, RCA and Presto Cutterheads. Others on special order.

Easily installed and operated. Includes heat control and calibrated meter.

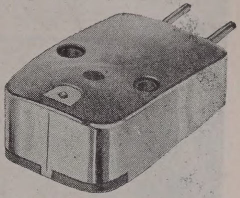
Select desired cartridge instantly by the turn of a knob. Stylus pressure automatically adjusted.

Arm resonance eliminated by viscous damping.

NEW
215 Series Cartridges



A True Moving Coil Design, with Linear Frequency Response (30-12,000 cycles) and High Compliance, gives you finest record reproduction.

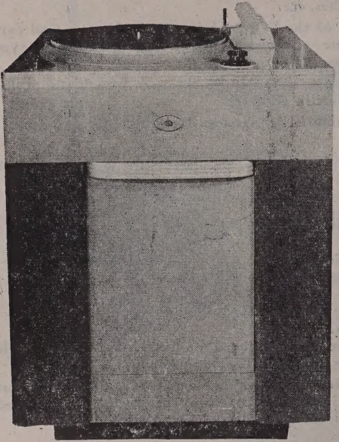
PRESTO RECORDING CORPORATION

WORLD'S LARGEST MANUFACTURER OF INSTANTANEOUS SOUND RECORDING EQUIPMENT AND DISCS

PRESTO 64-A TRANSCRIPTION TURNTABLE



Presto Type 153 Reproducer extra

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . maximum speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

SPECIFICATIONS

Standard Equipment: The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

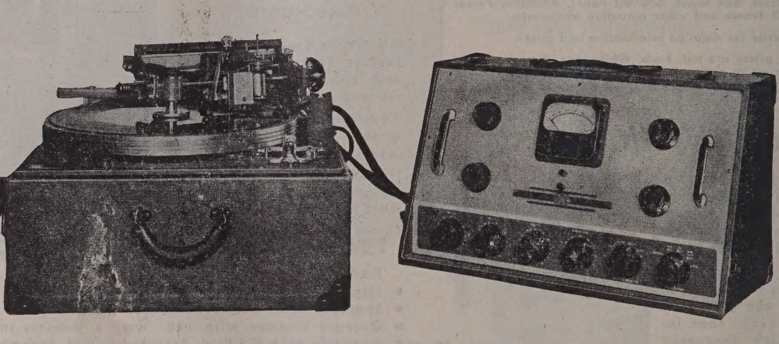
Speed Accuracy: No deviation from 33-1/3 and 78.26 rpm.

Noise Level: Mechanical noise originating in the equipment over 50 db below program level.

Power Requirements: Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

Mounting: Turntable and gear drive mounted in heavy wood cabinet 24 x 24 x 33 inches (61 x 61 x 84 cm.)

List Price, $585.00



PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationery operation.

The 6-N Recorder is outstanding in its suitability for broadcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at additional cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with an overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and power amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000 ±1 db; 2—NAB 33⅓ rpm recording; 3—present day 78-rpm recording; 4—NAB playback, and 5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pickups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 30 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

The PRESTO K-10 Recorder, formerly known as the K-8, the foremost machine of its kind to be used in schools for speech, voice, languages, dramatics, music., etc., is now offered for MICROGROOVE (long-playing) recording as well as the standard method.

Note these features:

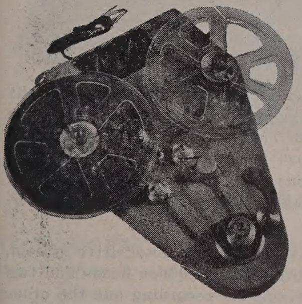
- Cutting pitches of 112 lines per inch Outside-in, 112 lines Inside-out, 224 lines per inch Outside-in and 224 lines per inch Inside-out.
- Standard unit is equipped for two speeds, 33⅓ and 78 rpm. Available for three speeds, 33⅓, 45 and 78 rpm at additional cost.
- The cutting head is equipped with an advance ball which regulates the depth of the groove more accurately than a counter spring.
- The K-10 is equipped with a turnover type cartridge having sapphire stylii for both standard and microgroove records. The cartridge is a ceramic type which has high output and is not easily affected by high temperature and humidity.
- A single control permits instant choice of recording, playback, or public address. Amplifier also contains radio and monitor jacks.

The PRESTO K-10 will, when set for MICROGROOVE, record 6¾ minutes on every inch of disc used. This means that a 15-minute recording with good fidelity can be put on one side of a 12″ disc! And a half-hour can be put on one side of a 13¼″ disc. Seven minutes can be recorded on one side of a 6½″ disc.

Net Price of **K-10**, less microphone and stand	**$366.50**

***$5.00** additional for 45 rpm pulley and record adapter.

TL-10 PRESTO TAPE DRIVE



Presto offers an ingenious tape transport mechanism which can be quickly installed on any sixteen inch turntable. This mechanism derives its power from the turntable—it has no motors of its own. The present model is for tape reproduction only—no erasing or recording is included. No amplifier is provided. The equalized output of the playback head may be fed directly into standard speech input equipment.

The TL-10 Tape Drive consists of a triangular shaped cast chassis which mounts on two small posts fastened to the turntable panel. One point of the triangle carries the tape capstan and this rests directly on the center pin of the turntable to which the TL-10 is attached. A belt drive from the under side of the capstan rotates the take-up reel through a slip clutch. The reproducer head and guide pulleys are located on the upper side of the chassis and the equalizer network is placed below.

Two capstans are available for 15 or 7½ inches per second tape speed based on the turntable speed of 78 rpm. Rewinding is achieved by transferring the empty reel to the take-up spindle and releasing the drag on the supply spindle. Specify type of turntable when ordering the TL-10.

The output of the head and equalizer is sufficiently high to be fed directly into a high quality preamplifier such as found in standard broadcast speech input equipment. An unusual type of capstan is employed, consisting of a wheel, relatively large in diameter, and having a rubber rim. The tape is wrapped around this capstan 180° and obtains very great traction against the rubber surface.

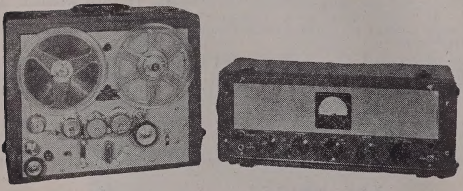
PT-920 TAPE RECORDER



TYPE RC-7 TYPE A-920
PT-920 COMPLETE IN CARRYING CASES

SPECIFICATIONS

Frequency response 50-15,000 cps at 15″/sec. tape speed and 50-10,000 cps at 7½″/sec.

Signal to noise ratio is 50 db with 2% distortion at 400 cps.

Instantaneous speed variations at 15″/sec. is not more than 0.25%.

Microphone input impedance normally 250 ohms.
Output of amplifier 15 ohms, 10 watts.
Bridging input 20,000 ohms, unbalanced.

Weights: RC-7—40 lbs.; A-920—35 lbs.

The PT-920 tape recorder has been developed for fully professional recording work and hence no compromise has been made with quality of materials and workmanship. The PT-920 has been designed especially for broadcast stations and recording studios and has found wide acceptance among colleges and universities as well.

This recorder consists of a three-motor drive system, separate erase, record, and reproduce heads and two separate amplifiers—one for recording and the other for monitoring. This arrangement permits instantaneous monitoring of the tape. The equipment takes standard RMA 7″ reels. Continuous recording with two mechanical sections (type RC-7) and one amplifier section (A-920) may be done by interconnecting the units through the SA-12 changeover switch.

The PT-920 may be had on standard 19″ relay rack mounting panels. Simply specify: "for rack mounting." Price same as in carrying cases.

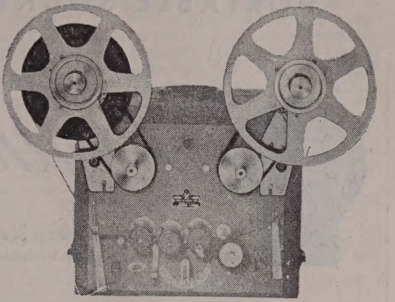
RA-1 REEL ADAPTER



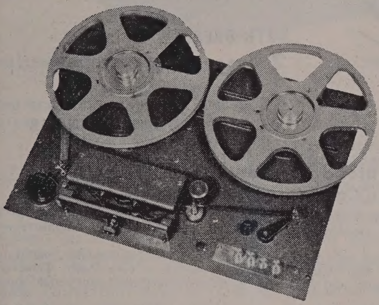
The Presto RA-1 reel adapters enable 10½ inch reels on NAB hubs to be used on the RC-7 mechanism. Since the RC-7 employs a true three-motor drive system—using torque motors identical to those in the Presto RC-11—the RA-1 reel adapters perform perfectly during all normal functions including fast forward speed.

The RC-7 (and the 900-R1 mechanism to which the RA-1 can also be attached) becomes a doubly valuable unit with these adapters for 10½ inch reels. These recorders perform as well as larger mechanisms and have the added advantage of being easier to handle when the large reels are not needed.

The RC-1 attaches easily to the RC-7 and the 900-R1 by loosening two screws on either side of the recorder panel.

Net Price **$39.00**

RC-11 RECORDER



The RC-11 Recorder is an unusually fine mechanism which can be mounted in a relay rack, in the CS-10 carrying case or the CC-1 console. The main panel is a heavy aluminum casting to which all other components are attached, including the Presto CDR-200 self-contained capstan drive assembly.

The three heads of the RC-11 are mounted as a group and are contained in a completely closed housing. Tape is threaded by simply dropping it into the opening made by pulling forward the front cover which also holds the tape off the heads for running the tape at fast speeds.

PERFORMANCE DATA

Frequency Response: 50-15,000 at 15 in/sec. and 50-10,000 at 7 in/sec.

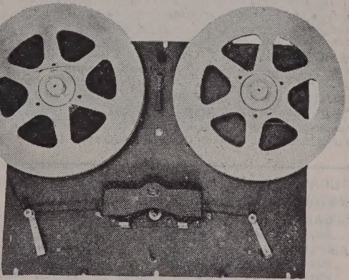
PB-17 TAPE REPRODUCER



The Presto PB-17 has been especially designed for playing tape on wired music systems, in industrial plants, amusement parks, skating rings, etc. The capstan is centrally placed with a half-track head on either side. Dual track tape traveling at 3¾ in/sec provides a continuous playing cycle of 8 hours. Tape reels are 14 in. diameter and hold 4800 ft. of tape. The PB-17 mechanism reverses automatically at both ends of the tape. Frequency response is 50-8000 cps. Net Price **$596.00**

900-A3 AMPLIFIER

The 900-A3 amplifier (formerly 900-A2) actually consists of separate tape recording and reproducing (monitoring) amplifiers and a common power supply. Output of reproducing amplifier is plus 20 db, 500 ohms. Three-microphone mixer is normally wired for 250 ohms.

Type 901-A is similar to 900-A3 except three-microphone mixer is replaced by 500 ohm transformer for line level.

Net Price (Rack Mounting or Portable) **$403.00**

A-920 AMPLIFIER

The A-920 amplifier is a combination tape recording and reproducing amplifier. Output is 15 ohms, 10 watts. Input is for single microphone, normally 250 ohms. Monitoring during recording is accomplished through the reproduce preamplifier using high impedance phones.

3 INSTRUMENTS IN ONE

- ★ **PHONOGRAPH**
- ★ **P.A. SYSTEM**
- ★ **BROADCAST RECEIVER** (when used with FM Tuner)

Indispensable for Recreation Centers, Broadcast Stations, Advertising Agencies, Schools, Hospitals, Record Collectors, Musicians, Etc.

THE RHYTHMASTER AND THE RECITALIST are the only full-range portable phonographs that balance the response characteristics of amplifier, speaker and speaker enclosure. By carefully compensating the natural resonances of these three components, undesirable reverberations are eliminated, and **truly lifelike sound reproduction is achieved.**

THE POLYPHONIC SELECTOR, an exclusive Rek-O-Kut engineering triumph, found only in the Recitalist and the Rhythmaster, maintains the proper relationship between the highs and lows when the record is played **at any volume,** either very softly or very loud! Thus, the high notes of the violins, chimes, triangles, cymbals, etc., are always reproduced clearly and distinctly in all their original beauty and cannot be drowned out by the loud passages of the brasses and percussion instruments.

THE RHYTHMASTER'S PATENTED CONTINUOUSLY-VARIABLE SPEED TURNTABLE plays records not only at 33⅓, 45 and 78 R.P.M., but at **ANY speed variation** from 25 to 100 R.P.M. Not only will the CVS Turntable play your records back at the exact pitch and tempo they were recorded, but also at any increased or decreased tempo to fit a particular need: **★DANCING:**—Set the rhythm of your folk-dance, tango, rhumba to your own taste. **★PHYSICAL EDUCATION:**—Set the rhythm most suitable for teaching swimming, exercises, etc. **★MUSICIANS:**—**(1)** You can now set the pitch of your records to your own personal interpretation of any recording. **(2)** You can set the pitch of the record to match the pitch of your piano or other instrument for purposes of accompaniment. **★SCHOOLS:**—Invaluable tool for teaching music, band instruments, languages, typing, dancing, gymnastics, etc. **★RECREATION CENTERS, CAMPS, COMMUNITY CENTERS:**—Powerful amplifier and speaker afford undistorted volume to cover an assemblage of 500 people or more.

THE RHYTHMASTER AND RECITALIST ARE BOTH "FLEXIBLE" INSTRUMENTS. (1) A microphone input enables "mixing" of live music or voice simultaneously with a recording being played. **(2)** Can be used as a high fidelity public address system. **(3)** By connecting an AM or FM Tuner, these phonographs become superb broadcast receivers.

The 260 Cartridge is a velocity-sensitive device and is inherently "flat" on a velocity basis. When measured with an equalized preamplifier having 6 db per octave bass boost and a standard test record, its performance characteristics are in accordance with the above curve.

PICKERING MODEL 260 DIAMOND STYLUS TURN-OVER PICKUP . . .

Inherent in the development, engineering and manufacture of the 260 Turn-Over Pickup, are the factors which have earned such a high reputation for Pickering Audio Components. . . . The 260 is now available with diamond styli — diamond styli wear longer, and prolong the life of recordings. The 260 has an output of 30 milivolts at 10 cm per second; it mounts easily in any type arm. The 260 Turn-Over Pickup may be used with the Pickering 410 Input System, 230H Preamplifier, 132E Record Compensator and 190 Arm or in any high quality playback system

THE PICKERING CARTRIDGE

PICKERING CARTRIDGES . . .
are the choice of audio engineers throughout the world. They are universally acclaimed because of their high output, wide range performance and low distortion. They have an output of 50 milivolts at 10 cm per second and are used wherever a fine cartridge is required in radio stations, recording studios and for purposes of quality control by leading record manufacturers.

Models D-120M, S-120M, D-140S and S-140S, with diamond or sapphire stylus, are without equal; they produce the finest quality reproduction of lateral recordings.

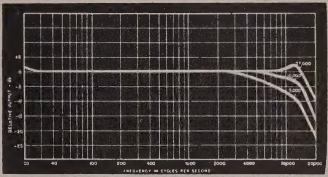
MODELS D-120M AND S-120M are for playing standard records and transcriptions requiring 2.5 mil styli. MODELS D-140S AND S-140S are for long playing, microgroove records; 33⅓ and 45 RPM.

Model S-120M with .0027" Sapphire stylus . . .

Model D-120M with .0025" Diamond stylus . . .

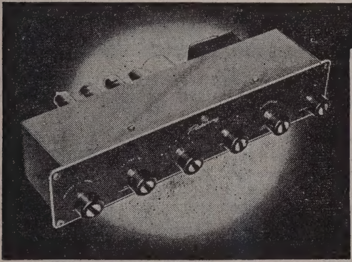
Model S-140S with .001" Sapphire stylus for long-playing MICRO-GROOVE recordings . . .

Model D-140S with .001" Diamond stylus for long-playing MICRO-GROOVE recordings . . .



Series 140 and 120 frequency response characteristics with various load impedance values are shown in the accompanying curves.

THE PICKERING 410 AUDIO INPUT SYSTEM



. . . is designed to provide a complete audio control center. Model 410 may be used in any high quality playback system. Three input channels are provided—one for magnetic cartridges and 2 "flat" channels for other audio circuits. A 3-position equalizer network is built into the magnetic cartridge channel and provides accurate equalization for LP, AES and 78 rpm recording characteristics. Separate bass and treble controls are also provided. These are of the step-type and permit bass and treble adjustments in 2 db increments. The tone control circuits are intended to compensate for record characteristics and for listener-environment acoustical conditions. *They are not intended to compensate for amplifier and/or loudspeaker deficiencies.* Model 410 is intended for use with the highest quality professional type playback equipment. The output of the Model 410 is fed from a cathode-follower circuit and will work into any high quality audio or line amplifier having a high impedance input. It may also be used with a transformer for the purpose of feeding a 500 ohm line. Because of its flexibility, low noise and low distortion level, it is ideally suited for bridging and monitoring purposes and for critical listening applications.

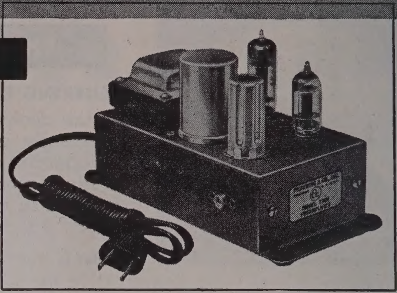
PREAMPLIFIER model 230H



EQUALIZES THE BASS RESPONSE OF RECORDS AND TRANSCRIPTIONS AND PROVIDES THE NECESSARY GAIN FOR HIGH-QUALITY MAGNETIC PICKUPS.

The Pickering 230H Preamplifier is designed to operate with any high-quality amplifier having a high impedance input. It is self-powered, operates from the 115 volt AC line, and is installed by simply plugging in.

Model 230H is unique in its accuracy of equalization, being superior to most broadcast station equipment in this respect. Further, the intermodulation and harmonic distortion is lower than good engineering practice requires in professional equipment. The 230H Preamplifier represents the most advanced design ever achieved in phonograph preamplifiers, and like all Pickering Audio Equipment, symbolizes maximum performance.

TECHNICAL SPECIFICATIONS

RECORD COMPENSATOR model 132E

PROVIDES THE FLEXIBILITY REQUIRED TO PROPERLY EQUALIZE FOR THE DIFFERENT RECORDING CHARACTERISTICS USED BY VARIOUS RECORD MANUFACTURERS.

The Pickering Record Compensator permits proper equalization of the amplifier system to produce optimum reproduction of individual records; because all linear circuit elements are used it has no inherent distortion. This Compensator permits each individual record to offer all of its quality without compromise . . . permits getting the maximum use out of scratched and worn records. Its six positions correctly equalize for all of the established recording characteristics including microgroove and standard records, domestic and foreign.

The Pickering Record Compensator is a most important addition to any record player equipped with an amplifier system having a high gain preamplifier, such as the Pickering 230H. It is easily installed, and like all Pickering Audio Equipment, symbolizes maximum performance.

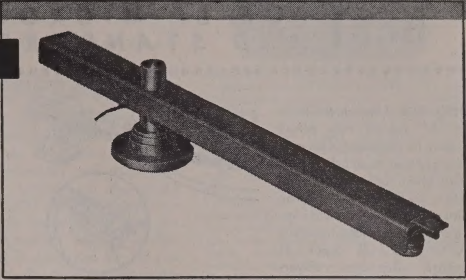
PICKERING PROFESSIONAL AUDIO COMPONENTS FOR RECORD PLAYBACK

PICKUP ARM model 190



THE ONLY ARM CAPABLE OF OPTIMUM PERFORMANCE ON BOTH MICROGROOVE AND STANDARD RECORDS.

Much distortion in playing records can be caused by an inadequate pickup arm, regardless of how good the cartridge. The most common causes of distortion inherent in the operation of conventional arms are poor tracking and excessive record and stylus wear. These undesirable qualities are a result of improper lateral and vertical moments of inertia and an incorrect relationship between the two. Further, many arms cause tracking error which creates needless distortion.

The Pickering 190 Pickup Arm is designed to overcome the disadvantage of all conventional arms, the shortcomings of which have been severely accentuated by the advent of LP microgroove records. Extensive investigation by Pickering engineers disclosed that reproducer arms which perform well on 78 RPM phonograph records and standard transcriptions will not necessarily produce good results on LP microgroove records. In fact no commercially available arm was found which would meet all of the requirements for this type of service.

The 190 Pickup Arm embodies all the features determined as significant and important to enable a high quality cartridge to meet the stringent requirements for playing LP records without distortion and free of record and stylus wear: 1—The ratio of vertical-to-lateral moment of inertia is as low as possible . . . 2—The vertical mass has been minimized in order to track any record without imposing extra vertical load on grooves. It plays badly warped records just as well as flat ones . . . 3—There is no spurious arm resonance at any frequency . . . 4—Pivot friction is lower than 3 gram centimeters and the bearings are rugged and trouble-free . . . 5—The arm is statically balanced about the vertical axis to eliminate tendency to jump grooves when subjected to bumping or jarring . . . 6—Offset head reduces tracking error to less than plus or minus 2½° . . . 7—Stylus point is protected against contact with anything but the record grooves. It cannot strike the turntable mat or cener-pin. It plays all size records up to 17¼" O.D. In addition to these important design considerations, the 190 Pickup Arm features: Sensitive tracking force adjustment . . . height adjustments for turntables from ½" to 2" high . . . one-hole mounting and self-contained levelling screws . . . plug-in cartridge holder . . . magnetic arm rest . . . stylus point completely visible for starting and cueing records . . . 16¾" long.

Pickering Cartridges used with the Model 190 Arm require 50% less vertical tracking force than is required when using conventional arms.

EQUALIZER model 163A

A loss-type equalizing network for use with the Model 161M Pickup. It is designed to compensate for most of the commonly encountered record characteristics. Position 1—flat high frequency response to over 15,000 cps. Low frequency rise to give full compensation from 500 to 40 cycles. Position 2—flat high frequency response. Low frequency response approximately 5 db. below position 1. Position 3—for NAB or Orthacoustic transcriptions. Position 4—Low frequencies same as position 2. High frequencies sharply attenuated to reduce surface noise. Attenuation starts at 4000 cycles. Position 5—low frequencies same as position 1. High frequencies same as position 4. 250/600 ohms output,—60 lb. Size 3½ x 3¾ x 5 inches. Shipping weight 2 lbs.

EACH PICKERING PICKUP AND CARTRIDGE IS UNCONDITIONALLY GUARANTEED

With the exception of the stylus point, all models of the Pickering Cartridge Reproducer and Pickering reproducing equipment, are covered by an unconditional guarantee provided that the unit has not been tampered with nor subjected to extraordinary abuse. AUDIO SWEEP FREQUENCY TRANSCRIPTION

The Sweep Frequency Transcription is a new method of making instantaneous frequency response runs. It has been designed with all correction factors included in the original recording, therefore, no charts or graphs are needed. Before the development of the Sweep Frequency Transcription, the tone record was used for frequency response measurements on playback systems. This method was both time consuming and laborious. If adjustments were required, a new frequency run was required after each adjustment. Now all that is needed is a cathode ray oscilloscope and a Sweep Frequency Transcription for instantaneous response measurements. Only a few quick adjustments on the equalizer circuits and the job is done. For complete frequency checking of all broadcast transmission equipment and components for production testing of phonographic reproducers, filter networks, audio amplifiers, preamplifiers, tone control systems and components.

A new and revolutionary cartridge designed to provide unequalled listening enjoyment of all records, regardless of speed or groove size.

Essentially two cartridges in one, the Titone Turnover represents the ultimate refinement of the needle change principle—only the tiny jewel tip itself is changed—thus permitting the design of a reproducer in which no unused but moving part can "eat up" the energy being transmitted by the needle.

Foremost among the many outstanding features of the new Turnover are:

Adaptability—**Because of its small size and its standard half-inch mounting centers, the new Turnover will replace and modernize most present two-speed cartridge installations.**

Simplicity of replacement—**Since only the needle rotates, the entire needle assembly may be readily removed or replaced.**

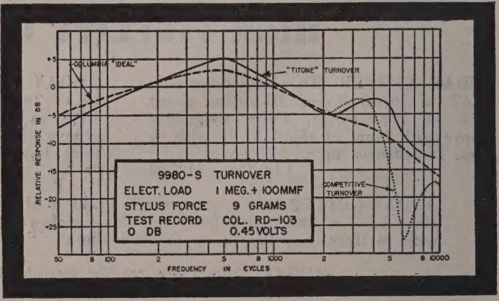
Proper groove fit—**Each jewel tip is accurately polished to insure an exact fit in the appropriate groove, thereby providing perfect coupling to the record.**

Superior tracking ability—**The high lateral compliance not only helps reduce record wear, but permits the stylus to track even the lowest frequencies at all speeds, and at a single low needle force.**

High sensitivity—**The new, improved ceramic element of the Turnover provides the unusually high output of 0.7 volts on the RCA 12-5-31V microgroove test record, eliminating the need for any pre-amplification.**

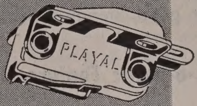
Outstanding response—**The wide frequency range of the new Turnover is unprecedented in piezoelectric pickups.**

The curves below show how the Turnover response follows almost exactly the curve specified by Columbia as "ideal' for the proper reproduction of their high-fidelity LP records. This outstanding response is pointed up in striking fashion by the dotted curve, showing the response of a typical competitive turnover type cartridge.



CERAMIC—the wonder element that reproduces electrically the exact tones recorded on the disc, yet is impervious to moisture and unaffected by temperature.

THE TITONE PLAYAL



The most versatile single cartridge ever developed, providing the means for playing all speed records without need for changing needle or adjusting tracking force.

With the introduction of the Playal ceramic cartridge and the new "truncated-cone" needle, Sonotone has produced the first truly universal cartridge, able to track all groove sizes without the distortion common to the usual "compromise" 2-mil radius needle.

This new cartridge, like the Turnover, is unequalled in performance, embodying the same advanced design features that have made the name Sonotone famous.

Principal among these features are:

Adaptability—Because of its standard half-inch mounting centers and small size, the Playal may be readily used to modernize most existing phono pickup installations.

Excellent Frequency Response—The curve below shows the smooth, wide range response of the Playal cartridge to both standard and fine groove records. The upper curve shows the response to Columbia 78 rpm test record, while the lower shows that to the RCA 45 rpm record.

Low Distortion—The extremely high lateral compliance combined with the unique "truncated-cone" needle enables the Playal to track any groove with negligible distortion, even at the very low frequencies.

High Sensitivity—New advances in the development of the ceramic element have produced a cartridge with an output of over 1 volt on standard records.

Easy Replacement—The Playal needle may be replaced without even removing the cartridge from the pickup arm. If preferred, a conventional 1-mil or 3-mil sapphire-tip needle may be used instead of the "truncated cone."

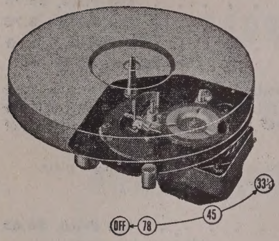
DELUXE THREE-SPEED RIM DRIVE FOUR POLE MOTOR



Model DSS

MODEL DSS — 78, 45, 33⅓ R. P. M. **115 volts a.c., 60 cycles**

Simple speed change is accomplished by shifting the idler wheel vertically to the appropriate diameter on the motor shaft for desired turntable speed. When shifting speed selector to off position, a switch turns the motor off and the idler wheel is disengaged from the motor shaft. The driving motor is of the four-pole, shaded-pole type resulting in absolute minimum of stray field radiation—ideally suited for use with all types of pickups including magnetic. Motor uses oilless bearings and motor is dynamically balanced to a fine degree.

Precision construction throughout—low friction oilless turntable bearing—radially operated shift lever—10 inch turntable.

List Price, $24.50

Dimensions: Length 6⅝"—Width 6 1/16"—Depth 2 21/32" below mounting plate. Furnished complete with 10 inch turntable, speed indicator dial, 45 RPM record adapter, off-on switch, and mounting plate ready for installation. Packed in individual cartons. Shipping Weight 6½ lbs.

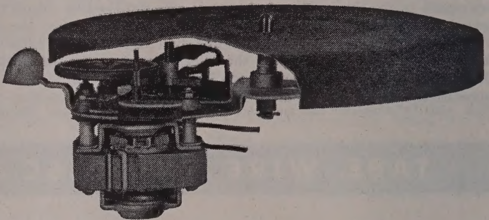
alliance PHONOMOTORS

New 3-Speed Phonomotors for Record Playe

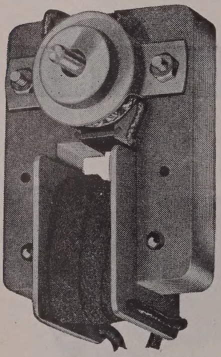
Drive 33⅓, 45, and 78 r.p.m. Records

New Alliance Phonomotor Model JPT8 features fewer moving parts — less "wow." There are no rubber bands or belts to slip, snap, distort or stretch . . . no external fan — neutral position to eliminate tire indentation. Motor has minimum height — dynamic balanced rotor — driving mechanism assures unimpaired performance at all speeds — minimum rumble, hum, and unequalled speed regulation! Removable, reversible center disc for 45 r.p.m. records. An *important* addition is the *neutral position* on the speed change lever, takes pressure off rubber tire. Available in 8″ or 9″ O.D. turntables.



Alliance 3-speed Phonomotor Model JPT8 (with standard 8″ or 9″ O.D. turntables).

NOMINAL RATING—33⅓ or 45 r.p.m. for 5 gram stylus force and 78 r.p.m. for 10 gram stylus force with 117 volts, 60 cycles, 0.3 amps., and 14½ watts input.



MOTOR MODEL MS

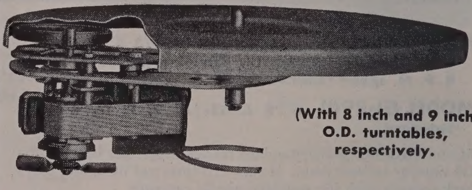
Powr-Pakt Model MS Motor

The Alliance Powr-Pakt Model MS motor is suitable for driving toys or other light loads. It is an adaptation of the quiet, smooth running motor which is used to power the Models MP8, MP9, and MP10 Phonomotors. It measures 3⅛″ x 2″ x 1¾″ not including the 7/16″ long shaft extension which has an 11/64″ diameter. Rotation is clockwise facing the shaft extension. Its self aligning bearings are of the porous bronze oilless type.

NOMINAL RATING—2800 r.p.m. at full load with 117 volts, 60 cycles, 0.3 amps., and 16 watts input. More detailed specifications are available upon request.

SINGLE SPEED

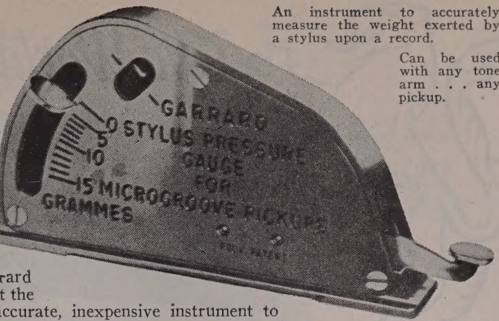
78 R.P.M. Phonomotor



(With 8 inch and 9 inch O.D. turntables, respectively.

This model MP8 Phonomotor is practically regarded as a standard power source! Operates on 110 or 220 volts, is made for 50 or 60 cycles, 16 watts input. Has no gears—runs at an even speed—has smooth, quiet, positive friction-rim drive. Ample proportioned bearings with large oil reserves assure long life. Motor and idler plate are shock mounted to minimize vibration transfer to turntable and motor board. Forced ventilation gives cool operation—the slip-type fan avoids any possible injury. Mounting plate maintains correct turntable height, regardless of mounting board thickness.

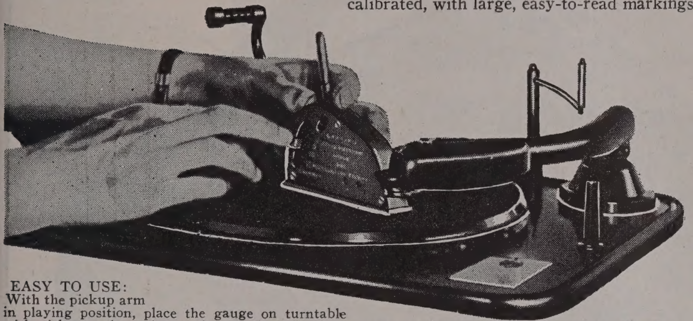
GARRARD STYLUS PRESSURE GAUGE *



An instrument to accurately measure the weight exerted by a stylus upon a record.

Can be used with any tone arm . . . any pickup.

An important new Garrard product developed to meet the demand for a simple, accurate, inexpensive instrument to measure the stylus pressure of pickups. To prevent excessive record wear, the stylus pressure should not exced cartridge manufacturer's specifications. In order to protect records, it is necessary to check the stylus pressure periodically, the pickup arm counterbalance being adjusted if necessary. The Garrard Stylus Pressure Gauge is scientifically calibrated, with large, easy-to-read markings at one gram intervals.

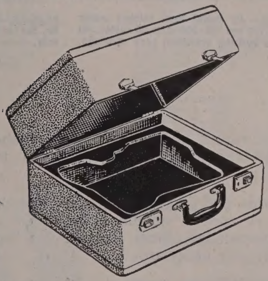


EASY TO USE:
With the pickup arm in playing position, place the gauge on turntable with pickup stylus point resting on the balance arm pan, as shown in illustration above. Slowly depress the indicating lever until the balance point is shown by the pointer appearing in the center of the small window. The indicating lever will then be in line with the stylus pressure on the gram scale.

FINE GARRARD CONSTRUCTION:

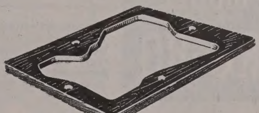
All moving parts are lightweight alloy, and completely sealed, so that no damage can be done to the delicate spring mechanism. Performance characteristics will not alter due to weather conditions or continued use. The handsomely designed Red and Ivory plastic case insures strength and durability.

GARRARD CARRYING CASE



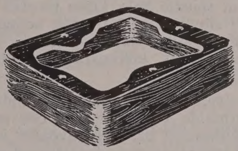
This De Luxe unit is fabricated of seasoned wood and covered with fine simulated leather. Piping runs completely around the case. The hardware used is the very finest durable brass and it has two fastening snaps. Easily carried, this unit is ideal for portable installations, for use in the home where one does not need the record playing equipment out unless it is in actual use. With solid mounting board or cutout for RC80 Changer.

GARRARD MOUNTING BOARD



Strong, durable ⅝″ Gumwood, sanded and cut out for the RC80. Unfinished surface, for easy staining.

GARRARD WOOD BASE



Wood base of finest veneer, cut to fit Garrard Changers. Smoothly joined, attractively finished in dark mahogany.

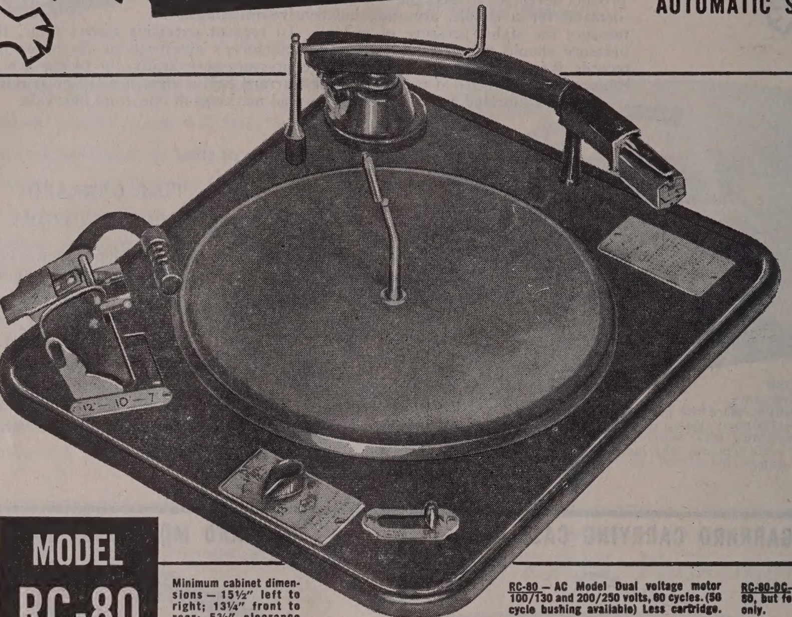
The World's Finest 3-SPEED RECORD CHANGER

GARRARD "Triumph"

FULLY AUTOMATIC WITH AUTOMATIC STOP!



MODEL RC-80

Minimum cabinet dimensions — 15½" left to right; 13¼" front to rear; 5¾" clearance above and 3½" clearance below the top of motor board.

RC-80 — AC Model Dual voltage motor 100/130 and 200/250 volts, 60 cycles. (50 cycle bushing available) Less cartridge.

RC-80-DC—Same as RC-80, but for Direct Current only.

Introducing several ingenious innovations in 3 speed record changers, the RC80, nevertheless, retains the watch-like custom construction which has made Garrard acclaimed by music lovers the world over.

The Garrard "Triumph" plays all types of records now in use, 33⅓-45-78 rpm, regardless of diameter (7"-10"-12") or size of spindle hole. Once records are placed on the player and simply settings made, action is completely automatic, with unfailing switch-off at the end of the last record. Tone arm is automatically returned to rest position.

The RC80 changer is surprisingly simple in operation. It has one turntable, one tone arm, one set of switches. But over-simplification has been avoided in the interests of quality and standards of performance. Certain features found for many years in Garrard instruments have been retained because good basic engineering demands them.

For example, record changing is accomplished by the same tried-and-true pusher-type platform mechanism proven best in previous Garrard models.

45 rpm records are played exactly as intended by the manufacturer. A special spindle is provided with each changer to accommodate these records. No "spiders" or artificial inserts are necessary.

The Garrard RC80 is equipped with interchangeable plug-in heads of universal design. It will therefore accommodate virtually any crystal or magnetic cartridge, including the Audak, Pickering and GE twist models.

The "Triumph" is heavily built for long, rugged service. It cannot sag or warp. Repairs and adjustments can be made inexpensively on parts which, in most other machines, would require expensive replacement in their entirety.

HEAVY DRIVE SHAFT:

A unique feature! Exclusive with Garrard!

Drive shaft for 33⅓ rpm and 45 rpm is heavy, thus obtaining more consistent quality at critical low speeds. Wows and wavers eliminated.

PUSHER TYPE PLATFORM:

Adjusts simply to 7"-10"-12" records regardless of diameter or size of spindle hole.

No record changing mechanism has been developed to equal the performance of the precision pusher platform. For records with standard center holes, the pusher platform is the only method that gives positive gentle record operation.

PULL-AWAY IDLER WHEEL

Avoids flattening of drive wheel when changer is not operating.

AUTOMATIC STOP:

Insures positive and unfailing action at end of any type record.

TRIPLE SPEED SWITCH:

Speed changes are clearly marked, easily made The RC-80 plays 33⅓, 45 and 78 rpm. Records are placed on the player and simple settings made. Action is then completely automatic, including automatic shut-off after last record of any size.

BALANCE-MOUNTED TONE ARM:

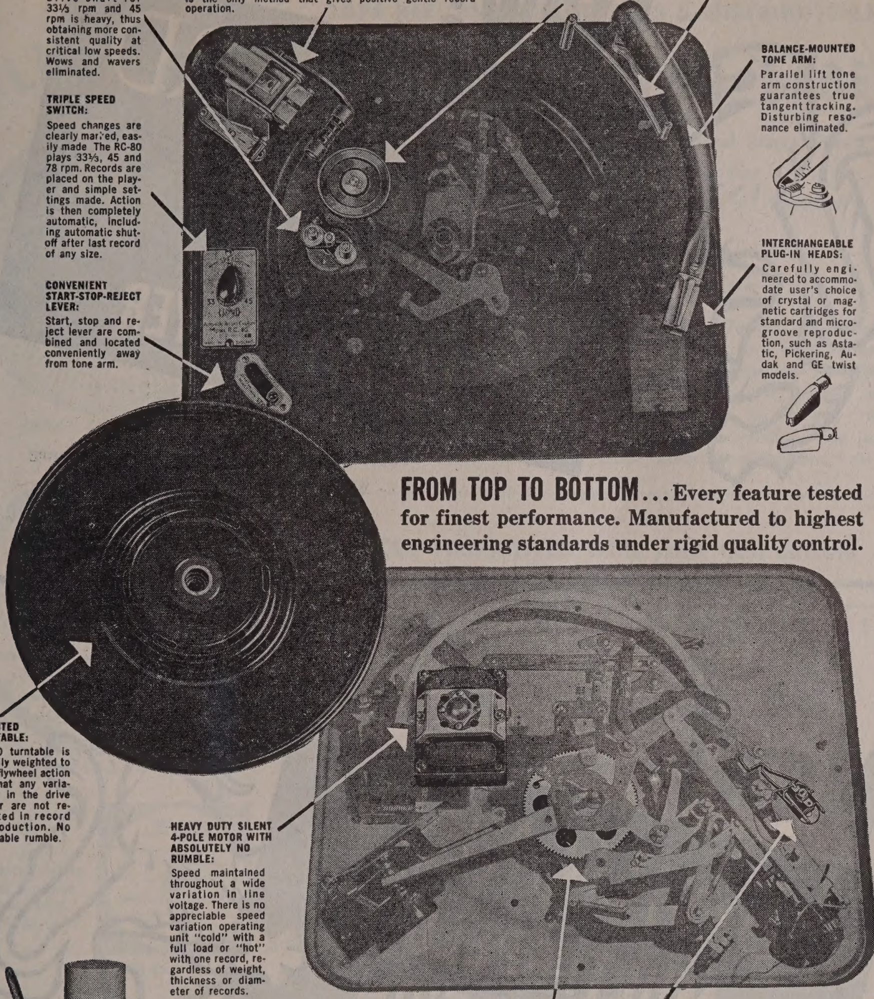
Parallel lift tone arm construction guarantees true tangent tracking. Disturbing resonance eliminated.

CONVENIENT START-STOP-REJECT LEVER:

Start, stop and reject lever are combined and located conveniently away from tone arm.

INTERCHANGEABLE PLUG-IN HEADS:

Carefully engineered to accommodate user's choice of crystal or magnetic cartridges for standard and microgroove reproduction, such as Astatic, Pickering, Audak and GE twist models.



FROM TOP TO BOTTOM... Every feature tested for finest performance. Manufactured to highest engineering standards under rigid quality control.

WEIGHTED TURNTABLE:

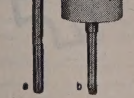
RC-80 turntable is heavily weighted to give flywheel action so that any variations in the drive motor are not reflected in record reproduction. No turntable rumble.

HEAVY DUTY SILENT 4-POLE MOTOR WITH ABSOLUTELY NO RUMBLE:

Speed maintained throughout a wide variation in line voltage. There is no appreciable speed variation operating unit "cold" with a full load or "hot" with one record, regardless of weight, thickness or diameter of records.

IMPORTANT!

Only a 4-pole motor can assure no hum when used with sensitive magnetic pickups.



TWO INTERCHANGEABLE SPINDLES:

Easily inserted, the two Garrard Spindles accommodate all records as they were made to be played. (If user prefers one spindle can be used throughout simply by plugging center hole of 45 rpm records.) a: Typical Garrard spindle for standard center holes. b: Easily inserted wide spindle, for 45 rpm records, remains stationary when record is played. Only a small collar revolves, assuring longer center hole and record wear.

PRECISION GROUND GEARS

Perfectly meshed to insure constant smooth action and years of service.

MUTING SWITCH:

No sound while changer operates on run-in or run-off grooves. Continuity of music undisturbed by noises.

WATCH-LIKE CONSTRUCTION

All parts are precision made, fastidiously assembled and simple to adjust.

A complete stock of replacement parts is readily available to all Garrard owners.

SIMPLE INSTALLATION:

Mounting holes are identical with former Garrard models, so that replacement is very simple. Unique spring suspension.

SOUNDCRAFT CORP.

FAMOUS NAME SOUND RECORDING DISCS

"THE BROADCASTING STATION STANDARD"

---

10 SOUNDCRAFT FEATURES

- Greater dynamic range of Soundcraft discs exceeds highest broadcasting requirements.
- Inaudible surface noise. Soundcraft microscopically filters all impurities out of coating materials and dries wet coatings with conditioned, dust-free air.
- High-frequency response to 15,000 cps. Soundcraft coating formulation combines proper physical texture with wax-like low cutting-friction.
- Dependability from batch to batch regardless of season. The Soundcraft disc plant makes its own weather, eliminates mysterious humidity troubles.
- Uniform cutting for both conventional and micro-groove recording. Soundcraft discs, to minimize minute variations in groove depth, are manufactured with the flattest, smoothest, aluminum bases obtainable.
- Long stylus-life assured. Soundcraft coating purity and low-friction reduce stylus wear and eliminate recording failures from stylus damage.
- 1,000 or more playings. Soundcraft's sealed-in lubricant for low needle-friction reduces wear to the point where dust in grooves and needle quality are chief controlling factors.
- Long storage-life, recorded or new. Under normal conditions Soundcraft discs cut and play after years of storage.
- Improved diameter effects. Soundcraft's superior coating formula minimizes high frequency loss and actually lowers surface noise as diameter decreases.
- Easy-to-pick-up thread. The Soundcraft coating is compounded with an exclusive ingredient to make thread throw toward center, and to minimize static charge.

Series 91 Microphone Connectors—3 and 4 Contacts

Extensively used on all types of portable apparatus, these connectors were designed primarily to use with microphones. Some of the advantages of Amphenol Microphone Connectors . . .

- Accidental disconnections are eliminated by a positive screw-type connection.
- Incorrect insertions are impossible because connectors are polarized.
- Pulling and twisting strain on soldered contacts is eliminated because a squeeze-type clamp grips cable securely after assembly.

Chassis receptacles mount in 27/32″ chassis holes. Maximum chassis thickness for chassis receptacle is 1/8″.

Mating families of connectors are listed in horizontal lines.

Amphenol Coaxial and Twinax RG Cables are produced to standards surpassing military specifications for electrical performance and mechanical excellence. Conductors are centered 20% closer for Coax and 50% closer for Twinax Cables than required by "AN" specifications.

Most cables utilize the exceptional dielectric properties of polyethylene—low loss, flexibility, mechanical stability. The outer jacket in the majority of approved types is a tough, highly resistant vinyl jacket which is non-hygroscopic and impervious to most acids, alkalies, oils and gasoline. Other types are armored for still greater mechanical protection.

Amphenol has cables that are designed to operate efficiently at temperatures as high as 500° Fahrenheit. Teflon is used as the dielectric because of its low loss, high voltage breakdown and its ability to withstand heat.

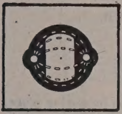
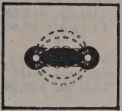
14-271 Tubular Twin Lead

U.S. Patent No. 2543696

Amphenol's Tubular Twin-Lead is unequalled as an economical, low-loss lead-in for UHF television. This low-loss characteristic also makes it the ideal lead-in for fringe areas and installations requiring long lengths of lead-in.



This illustration shows the concentrated field of energy between the two conductors, largely protected by the protective canopy of virgin brown polyethylene. This field of energy is almost entirely unaffected by any exterior condition.



The field of energy in ordinary flat twin-lead is largely outside and exposed to all weather conditions. Under adverse conditions, the signal loss of flat lead-in will run as much as three times the loss of Tubular Twin-Lead under identical conditions.

Twin-Lead Transmission Lines

The use of brown pigmented polyethylene dielectric assures minimum RF loss and a more constant impedance over the exceptionally long life of Amphenol Twin-Lead. This remarkable material remains flexible at — 70°C., repels water and is unaffected by acids, alkalies and oils.

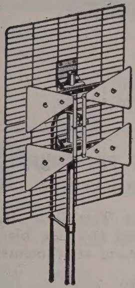
UHF TELEVISION ANTENNAS

Because UHF television is so much more critical than VHF television, great care must be taken to insure that each antenna system provides the maximum signal strength available. The selection of an antenna must be governed by the physical environment, distance from the transmitter, the number and the channels of available stations, etc. The Amphenol line of UHF antennas has been designed to make available a variety of antennas and accessories that will permit customizing each antenna system to the immediate installation.



Two Model 114-065 BO-TY Antennas Stacked for Greater Gain

114-065 BO-TY BROADBAND ANTENNA

The 114-065 BO-TY with Reflector is an inexpensive, quality antenna designed to receive all UHF channels from 14 to 83. The antenna and the reflector are pre-assembled at the factory and packaged as a single unit. It is intended for use in major signal areas and has a uni-directional reception pattern with moderately high gain on all the UHF channels. Each 114-065 is shipped with one Stacking Rod. When a stacked array is desired for added gain, it is necessary to have only two 114-065 BO-TYs and to utilize the two Stacking Rods furnished.

"500" SERIES PLUGS AND SOCKETS

For Complete Listing of 500 SERIES, Write for No. 500 Catalog

Designed for 5,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}$'' x $\frac{3}{32}$''.

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from ½" diameter and 1¼" diameter in steps of ⅛", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

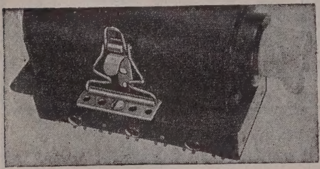
LOCKS FOR 500 SERIES PLUGS AND SOCKETS



Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

1400 SERIES PLUGS AND SOCKETS

This series of "disconnect" plugs and sockets has the distinct advantage of low cost for a separate unit handling many circuits. Due to exposed metal parts, it is recommended for use when the complete unit is within a housing.

Reduces costs of servicing units. Advantageous in shipping when it is desirable to pack units separately. Polarized—assures correct coupling. Spring temper brass sockets assure perfect contact. Standard units are listed below from 5 to 16 contacts. However we can supply units having as many as 30 or more contacts.

On No. 1420 or larger we recommend the plug be divided into two or more units, as a single long plug is not mechanically strong. The socket will be made in one assembly.

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite.

The Terminals and Binder Screws are of brass, nickel plated. **Marker Strips** may be ordered and imprinted to supply terminal designations. These Marker Strips mount beneath Terminal Strips and also afford insulation from metal mounting surface. **See page 21 for imprinting charges.** See pages 24 and 25 for dimensions.

For Right Angle Mounting

Illustration at right shows a No. 3-162 A-R Fanning Strip connected to a No. 3-142 Barrier Strip.

Jones Fanning Strip Terminals are of .032" Brass, Cadmium Plated. The Bakelite strips are furnished with a hole in either the right or left end for fastening the cable with a cable clamp or lacing twine. Simplifies cable or harness wiring, assuring positive connections. Makes replacement of units an easy matter and assures correct connections after servicing.

In many instances where there is not sufficient room for the standard Fanning Strips we can supply those listed formed for right angle mounting permitting use when Barrier mounts flush with the side of the chassis. Specify Series 160A, 161A and 162A instead of 160, 161 and 162. Prices slightly higher.

Vector SOCKET-TURRETS

BACKGROUND FOR CIRCUITRY

Vector Socket-Turrets and Plug-In units provide a unique method for mounting electronic circuit components, saving space and increasing efficiency. Catalog numbers shown in bold face type are the most popular types.

OCTAL, MINIATURE and NOVAL SOCKET-TURRETS

Sockets are standard bottom mounting with steel saddles carrying 4 ground lugs. Body is mica-filled phenolic carrying wrap-around brass contacts, cadmium plated. Terminal posts are ½" O.D. with 1/16" wall, made of Grade XXXP laminated tan phenolic joined to socket. Six plated brass terminals at far end of turret plus three, six or none near socket. Mounting holes required are: for Octal 1" ctr. hole, side holes spaced 1-5/16" for 0.134" saddle holes (a larger type is also available—See 'A' below); for 7 pin miniature, ⅝" ctr. hole, side holes spaced ⅞" for ⅛" saddle holes; for 9 Pin Noval, ¾" ctr. holes, side holes spaced 1⅛" for ⅛" saddle holes.

Catalog Numbers			*Height	Description
10-O-12T	10-MB-12T	10-NB-12T	2½"	12 term. in 2 rings spaced 1⅜"
10-O-9T	....	....	2½"	9 term. in 2 rings spaced 1⅜"
8-O-12T	8-M-12T	8-N-12T	2"	12 term. in 2 rings spaced 1"

6-O-6T	6-M-6T	6-N-6T	1½"	6 term. in 1 ring only
....	S7	S9	....	Shield Base for attaching shields

*Height measured from chassis to far end of turret.

For variations not always available from distributors but obtainable at the factory:

Add 'A' to No. for large octal socket (1½ Mtg. Ctrs., 1⅛" hole).

Add 'J' to No. for 'MFE' socket casting, beryllium contacts, silver plated, hot tin dipped.

Add 'U' to No. for 4-40 U nuts which slip on saddle for easy mounting.

Add 'G' to No. for impregnation of turret for moisture and fungus protection.

Substitute 'L' for 'O' in No. if loctal socket required, (1-1/16" hole, 1-5/16" mtg. ctrs.).

Note: Letters are printed on all above turrets to indicate terminal positions. A-F inclusive appear on remote end, G-L inclusive on row near socket (H, J, L for 3 terminal rows). "A" and "G" over "1" of socket. Socket-Turrets are covered by Patent Nos. 2,604,584 & 2,624,775.

SADDLE NUTS: A 'U' type nut which slips over standard socket saddles has been especially designed to promote easy mounting on the chassis. For #4-40 machine screws. Order as #440-U nut or simply add 'U' to number of socket ordered.

TEST ADAPTERS

Vector Test Adapters are ideal for making measurements from the tube side of electronic equipment, where it is inconvenient to reach into the wiring compartment. The adapter is simply inserted between tube and socket completing the circuit and providing test tabs connecting with tube elements.

The T-789 set combines the 7-pin and 9-pin miniatures and octal in a plastic case. Or adapters may be obtained separately as follows:

Catalog No.	Tube Type	Body Dia.	Skirt Dia.	Length less Prongs	Lead Shielding
T-7-M	7 Pin Min.	0.74"	1.03"	1.47"	None
T-8-O	8 Pin Octal	1.26"	1.56"	1.50"	None
T-9-N	9 Pin Noval	0.87"	1.16"	1.47"	None
T-789	Set of above three types in case (1.75" x 3.75" x 2.62")				

TUBE BASE PLUGS

These plugs fit the 7 and 9 pin miniature sockets and are useful for many experimental or plug-in purposes.

Cat. No.	Type	Dimensions (Fig. 1) A	B	C	D	E	F	G	H	Retainer Ring No.

Vector PLUG-IN UNITS

FOR UNITIZED CIRCUITS

Amplifiers, counters, oscillators and the like can be readily assembled completely on Plug-Ins, permitting quick changes of circuits. Making a Plug-In unit involves little more than soldering in a few capacitors and resistors.

ECONOMICAL AND CONVENIENT

Plugs are standard mica-filled, ring mounted octal style with 8 prongs as standard. (9 or 11 prong plugs also available—see below). Sockets are standard mica-filled phenolic in octal, 7 Pin miniature or 9 Pin noval as ordered. Contacts are cadmium plated brass. Terminal turrets are Grade XXXP phenolic tubing 1/2" O.D. with 1/16" wall, carrying 12 plated brass terminals. 5″ OSCILLOSCOPE WO-88A

If your present 'scope is a temperamental performer on the service bench, or if your business is limited by "substitute" TV servicing methods, you owe it to yourself to find out about the "88".

"Superlative in its price class" best describes this new 5″ 'scope.

Tops on the list of quality features is the 88's "picture-perfect" square-wave response and its remarkably faithful reproduction of horizontal and vertical sync and blanking pulses, sweep alignment traces, and other complex wave-shapes encountered in TV servicing.

A direct-coupled push-pull, two-stage vertical amplifier with frequency-compensated and voltage-calibrated attenuators gives the "88" plenty of deflection sensitivity with a uniform frequency response maintained over the entire range of the attenuators. And sync action is exceptionally stable over the entire range of the 'scope.

You'll find such quality extras as—front-panel source of calibrating voltage, graph screen scaled directly in peak-to-peak volts, "plus" and "minus" sync, 60-cycle sweep with wide angle phasing control, special maintenance control adjustments accessible from outside of cabinet, high-impedance input, and many others in the new RCA "88".

7″ OSCILLOSCOPE WO-56A

There's just something "extra" about the WO-56A that makes the professional technician itch to get at the controls.

And just look at those controls! Dual concentric knobs for all coarse and fine adjustments eliminate unnecessary hunting and fumbling when you're locking in on a tricky wave form.

Yes, here's a 'scope designed for you—the user. From the large 7″ mu-metal-shielded CRT in a compact, space-saving cabinet to performance standards which include high sensitivity and wide frequency range—the WO-56A delivers for laboratory, factory and shop.

Identical vertical and horizontal direct-coupled, push-pull amplifiers have frequency-compensated and voltage-calibrated attenuator networks. A horizontal trace expansion of 3 times screen diameter with comparable vertical centering permits observation of minute trace detail. You'll like the special TV preset sweep facilities, the retractable light shield, 60-cycle sweep and wide angle phasing control, "plus" and "minus" sync for locking-in "upright" or "inverted" wave shapes, high input impedance, peak-to-peak calibrating voltage, and many other time saving features.

TELEVISION SWEEP GENERATOR WR-59C

Say goodbye to sweep-generator problems! Ever have difficulty with visual alignment of TV receivers and front ends? Who hasn't! Then why not find out about the television sweep generator preferred and used by most major television manufacturers for the rigors of continuous production-line service . . . the RCA WR-59C Television Sweep Generator.

Professional service technicians find the WR-59C tops for visual alignment and trouble-shooting of TV tuners, sound and picture if amplifiers, trap circuits, and video amplifiers. Combining such outstanding features as preset switch positions for all VHF TV channels and continuous tuning from 300 Kc to 50 Mc, the WR-59C has a high-output voltage flat and free from spurious responses. Fundamental signals are generated on all channels by a push-pull oscillator.

Such bonus features as a special blanking circuit for producing a zero reference line on an oscilloscope for quantitative gain measurements and for balancing discriminator circuits, and a phase-controlled sweep voltage at power-line frequency for 'scopes lacking sweep and phase controls, a dual-piston attenuator with a range down to 5 microvolts . . . make this instrument a welcome addition to the most professional of service shops.

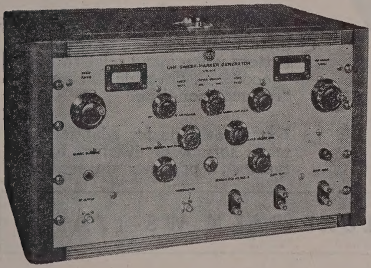
UHF SWEEP-MARKER GENERATOR WR-40A



A precision instrument designed for laboratory applications, the RCA WR-40A combines in one instrument a sweep-frequency oscillator, a marker oscillator, and a crystal calibrator for use in the design development of tuners, filters, antenna systems, and amplifiers for operation in the 470 Mc to 890 Mc UHF television band. A system of mixer and adder stages is used for superimposing markers upon the response curve after the signal has passed through the unit under test, thus minimizing distortion of the response curve. The WR-40A features return-trace blanking, controllable from the front panel, crystal-controlled markers at 1 Mc and 10 Mc intervals throughout the tuning range, and a variable marker accurate to within ±0.5%. A built-in demodulator may be used to monitor directly output from the sweep oscillator or to demodulate the output from the unit under test.

RADIO BATTERY TESTER WV-37A

Now you can test portable-radio batteries under actual load or "turned-on" conditions without the necessity of placing batteries in the set. The RCA WV-37A's built-in load circuits eliminate the time-consuming method required to test batteries with the conventional voltmeter. And the RCA WV-37A also gives you a more accurate indication of true battery voltage than does the conventional voltmeter alone.

The selector switch on the front panel has nine prefixed positions to accommodate popular portable-radio batteries ranging from 1.5 volts to 90 volts. Eight blank test positions are provided to enable you to set up testing conditions of your own choosing for testing additional battery types.

Red and black plastic test prods joined to 36-inch test leads are permanently attached to the tester. Weighing less than 3½ lbs. the WV-37A measures a full 9½" long, by 6" wide, by 1½" deep.

You'll find the new RCA WV-37A Radio Battery Tester a worthy addition to your service shop. Use it on the sales counter for checking used batteries or assuring the customer that replacement stock is fresh . . . on the service bench for accurate battery voltage indication under normal load conditions—on shelf stock to keep a "running-check" on the condition of your shelf battery stock.

HIGH VOLTAGE PROBES WG-289, 290

RCA High Voltage Probes WG-289 and WG-290 are identical except for their connectors. The WG-289 is provided with microphone-type connector for use with the VoltOhmysts and other voltmeters having microphone-type connectors. The WG-290 is equipped with phone-tip connectors for use with voltmeters having phone-tip jacks.

These High Voltage Probes are capable of extending the dc voltage range of your meter to 50,000 volts. When used with a VoltOhmyst the input resistance is increased to 1000 megohms, an important feature when working in high-impedance circuits where loading seriously affects the stability of the circuit under test.

A choice of five multiplier resistors is available enabling these probes to be used with practically all popular electronic and non-electronic voltohmmeters.

The LOAD-CHEK for the first time makes it possible for every technician to utilize what is perhaps the simplest and quickest of all service methods—servicing by Power Consumption Measurements, long proven by auto-radio servicemen as a rapid method of localizing troubles in auto radios. Triplett Model 660 is the first Wattmeter to be produced at moderate cost, and with the proper ranges, to bring this short-cut method within the reach of every radio and TV serviceman.

Following are only two of many time-saving uses of this new instrument:

Locating A Short—The chassis tag may show a normal consumption of 225 Watts. Simply plug the power cord of the chassis into LOAD-CHEK (no loose ends to connect or be in the way). Note the reading—which should be possibly 350 Watts. By removing the rectifier tube you can determine at once which side of the tube the short is on. With a soldering iron and long-nosed pliers you can check through the chassis, locate and correct the trouble without having to lay down tools or to check with lead wires!

Replacing Burned-Out Resistors—With the chassis to be repaired plugged into a LOAD-CHEK MODEL 660, note the wattage reading with the burned out resistor circuit open. Now replace the resistor. Should the increase in watts be greater than the resistor rating, it indicates an extra load has caused the trouble which has not been cleared. LOAD-CHEK is made-to-order for the busy serviceman because it's a Time-Saver; and at its moderate cost can be standard equipment on every service bench.

NEW MUTUAL CONDUCTANCE TUBE TESTER

Here is Proportional Mutual Conductance tube testing by a new patented circuit—offering advantages hitherto unavailable to the service trade. The right Tube Tester for TV and Radio Tubes. The circuit provides the true proportional relationship to the Gm curve for measuring in Micromhos the tube characteristics. Diodes and low power thyratrons are tested on the GOOD-?-BAD scale.

This new tester handles the most perplexing tube testing problems in many fields—Radio Servicing, Industrial Production, Laboratory Testing, Theatre and P.A. Equipment, Communications, etc. Patented circuit for Proportional Mutual Conductance tube testing employs actual signal oscillator (4KC) for grid signal. Thus, hum and ripple, and tubes with open grids present no problem, and cannot give false readings. Signal component of output is picked off and measured by the specially designed instrument circuit. Tests all types of receiving tubes, low power transmitting tubes, rectifiers, thyratrons, voltage regulator tubes, eye tubes, subminiature, acorn, ballast tubes and pilot lamps. Continuity test circuit also may be used to check electrical appliances for shorts or open circuits. Flexible three-position lever switches for complete coverage of both present and future tube connections. Only three positions mean no guess work on settings. Speed and ease of operation marks use of the tester. 0-10 ACV (variable) available for testing low voltage tubes. Also five other voltages available. (10, 30, 70, 100 and 250). SENSITIVE RELAYS

Highly sensitive Triplett relays of the D'Arsonval moving coil type, are carefully designed to give dependable, satisfactory performance. Since relays cover such a wide field and most of them are made to special order, no standard models are listed. Contacts are normally rated at 25 Milliamperes, 25 Volts; higher ratings if required. Instrument relays are provided in 2", 3" or Twin cases. Years of instrument experience are available to every relay user through Triplett's extensive service. Send us your applications with information specifying maximum and minimum currents and voltages which will pass through relay coil and contact points, etc.

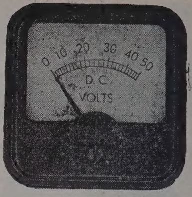
EMICO PRECISION INSTRUMENTS

FOR PANELS AND TEST SETS

Electro Mechanical Instrument Co.
813 Chestnut Street, Perkasie, Pa.



TYPE RF-2C

EMICO panel and test meters are rugged and reliable instruments. Cases are of steel and finished in durable black. DC meters have the new HI-TORK magnetic movements and are accurate to well within 5%. AC meters are of the moving iron type and are also accurate to within 5%.

MOUNTING—All model NF-2C and RF-2C meters will fit into a 2$\frac{1}{16}$" diameter hole and are mounted by means of a U clamp.

DESIGN—EMICO meters are designed to give satisfactory service under the most severe conditions. They are styled to add to the prestige and appearance of electrical equipment.

CALIBRATION—Since the instruments are calibrated in steel cases, their accuracy is not affected by panels made of magnetic materials of nominal thickness.

GUARANTEED—All EMICO instruments are guaranteed against defective material and workmanship for a period of one year after date of purchase, and will be repaired or replaced if sent to the factory postpaid with a 50c handling charge.

EMICO instruments are available in quantities to jobbers or manufacturers in the following sizes: NF-2", RF-2", RF-2½", and RF-4½" at 3% accuracy. We invite your inquiries on instruments for special application.

INSTRUMENTS THAT STAY ACCURATE

MODEL 260
Set Tester

World's Most Popular High Sensitivity Set Tester For RADIO and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control, diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

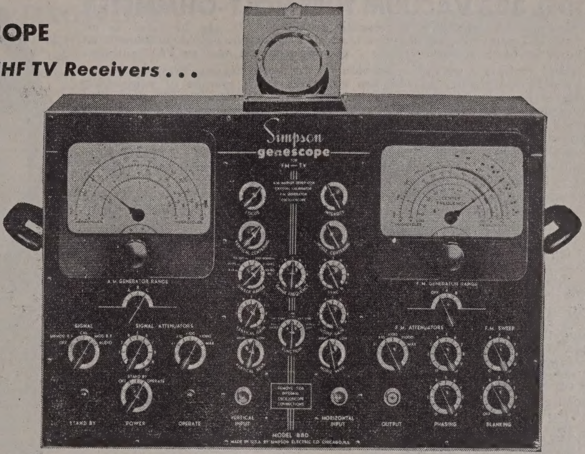
MODEL 480 FM TV GENESCOPE

Ideal For Servicing Both VHF and UHF TV Receivers . . .



In addition to providing all the required signal sources for VHF television servicing, the Model 480 Genescope also includes a high sensitivity oscilloscope with unique advanced design in every detail and equipped with a high frequency crystal probe for signal tracing. Harmonics of the FM Generator can be used to observe overall response wave forms in UHF receivers and harmonics of the AM Generator make marking of this wave form possible through most of the band.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set to an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

Multiple shielding, generous bypassing of all power leads entering oscillator enclosures and adequate line input filtering eliminates excessive leakage and oscillator interaction.

Step and continuously variable attenuators on both AM and FM sections provide minutely controlled signal levels from a few microvolts for fringe area peaking operations to a magnitude suitable for single stage alignment.

A self contained impedance matching network is adjustable to any receiver input, balanced or unbalanced, in a matter of seconds.

Values available include 300 ohm and 75 ohm termination with or without an intermediate attenuator pad and with or without isolating condenser, open termination for maximum voltage output with or without isolating condenser and many other useful combinations.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the caibnet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

MODEL 303 VACUUM TUBE VOLT-OHMMETER

The Simpson 303 really is a versatile instrument. It can be used as an electronic DC voltmeter, an ohmmeter, an AC voltmeter, an AF voltmeter, an RF voltmeter (with accessory probe), an output-meter, and an FM indicator.

The 303 truly is a worthy companion of the world famous Simpson Model 260 Volt-Ohm-Milliammeter. Simpson engineers spent months of painstaking research in the laboratory, working in close co-operation with TV set manufacturers to produce the 303. This ruggedly built instrument has a dimension of only 120 cubic inches, and is 60 to 70% more compact than any similar instrument. In achieving this compactness for greater portability Simpson did not sacrifice accuracy or functional value. Its large 4½-inch meter is easy to read.

Features such as low current consumption and wide voltage and resistance ranges make the 303 an extremely versatile instrument.

Like all other instruments bearing the Simpson name, the 303 is of the highest quality construction throughout, but sells at an amazingly low price.

Twenty-five separate meters at the turn of a switch. That is what you get in the Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

MODEL 476 MIRROSCOPE

Simpson takes pleasure in presenting the revolutionary Model 476 Mirroscope.

The objectives behind the design of the Model 476 were to eliminate certain inherent disadvantages found in the conventional type of oscilloscope.

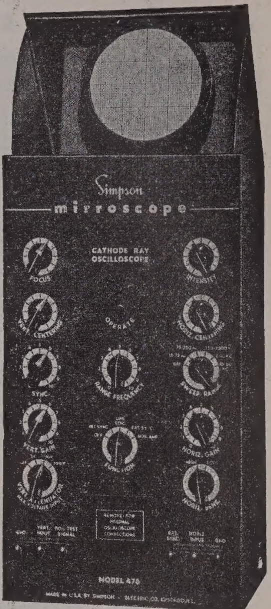
By use of the Mirroscope principle the 5″ cathode ray tube is mounted in a vertical position. This construction reduces bench space requirement to an area of only 9″ x 8″ thereby permitting better concentration of associated equipment for any type of test procedure.

The cathode ray image is reflected from a high grade mirror mounted in the adjustable cover at the top of the cabinet, thus the viewing surface is brought near eye level when the instrument is used on benches of normal height. The mirror angle is quickly and easily adjusted to any position of the operator.

The cover with integral side wings forms an effective shield against external light sources or may be closed down for protection of the tube and mirror when the instrument is not in use.

The upright construction permits location of controls and connections for maximum convenience and allows for internal cathode ray tube connections at the front of the panel instead of the rear.

These and many other advantages will be disclosed when the construction and specifications of the Model 476 Mirroscope are considered fully.



SENSITIVITY:

Vertical direct	— 12 volts rms per inch.
Vertical amplifier	— 20 millivolts rms per inch.
Horizontal direct	— 14 volts rms per inch.
Horizontal amplifier	— 38 millivolts rms per inch.

Horizontal trace expansion is over 4 times tube diameter. This makes it possible to examine minute portions of a response pattern for finer detail.

Linear Sweep frequency is continuously adjustable in five overlapping ranges from 15 cycles to 60,000 cycles. Internal, external or line frequency synchronization with variable amplitude is available.

Means for intensity or "Z axis" modulation is provided. Approximately 14 volts peak will blank a trace of normal intensity.

The vertical amplifier frequency response is within 3DB from 20 cycles to over 300,000 cycles and is usable to well over four megacycles. Square wave slant and overshoot is held to less than 5 per cent of amplitude. This response will be found adequate for all phases of television receiver service including observation and diagnosis of Sync. signals.

INPUT IMPEDANCE:

Vertical direct	- 10 megohms, 15 mmf.
Horizontal direct	- 10 megohms, 15 mmf.
Vertical amplifier	- 300,000 ohms, 30 mmf.
Horizontal amplifier	- 500,000 ohms, 15 mmf.

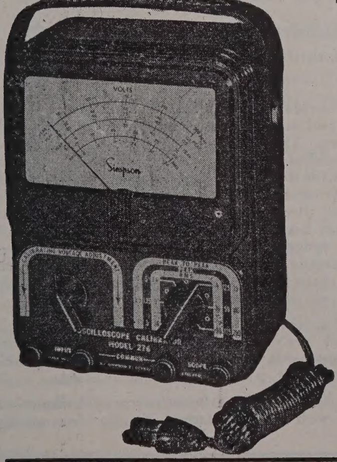
MODEL 276 OSCILLOSCOPE CALIBRATOR



The Simpson Model 276 Oscilloscope Calibrator adapts your oscilloscope for quick and accurate voltage measurements by comparative methods.

A twelve position switch provides six ranges each of RMS, Peak and Peak to Peak voltage with six alternate neutral positions for viewing the signal under observation.

Continuously variable calibrating voltage of power line frequency is supplied by the Model 276 and is indicated on a large 4½ inch meter which indicates RMS values from 0.06 volt to 90 volts, peak values from 0.1 volt to 125 volts and peak to peak values from 0.2 volt to 250 volts.

When the Model 276 Oscilloscope Calibrator is connected in series between a signal source and the Oscilloscope input, a convenient switching arrangement makes it possible to make quick comparative checks between the relative amplitude of the signal and of the measured voltage source. This system is most convenient because leads do not have to be shifted around in order to calibrate the signal on the oscilloscope.

Housed in a rich black molded bakelite case identical to Models 260 and 303, this instrument will prove a worthy addition to the service dealer's equipment.

MODEL 488 FIELD STRENGTH METER . . .

Essential For Both VHF and UHF TV Receiver Installations

The Simpson Model 488 Television Field Strength Meter provides means for the measurement of Television signals in any locality. IT WILL WORK EQUALLY WELL FOR VHF AND UHF!

Although special consideration was given to fringe area applications in the design of this instrument it will be found of extreme value in all types of installations.

Location of maximum signal areas, antenna orientation and location, comparison of antenna systems, adjustment of boosters and checking antenna and lead-in installations are only a few of the many functions available.

Full scale sensitivity of the lowest range is approximately 50 microvolts and is an outstanding feature for those concerned with fringe area installations where maximum efficiency must be attained. Three additional ranges of approximately 500, 5000 and 50000 microvolts extends the usefulness of the Model 488 into areas of higher signal strength. Antenna installation for UHF reception requires exacting positioning and orientation and this requirement is completely satisfied with the Simpson 488.

The large 4½ inch modernistic meter is easily read from a considerable distance and all controls and connections arranged for greatest accessibility.

Model 488 is housed in a beautiful gray hammerloid finished case with sturdy leather handle for complete portability and ease of use.

MODEL 485 SYNCHRONIZED CROSSHATCH PATTERN GENERATOR

A Modern Instrument For Today's Linearity Adjustment Problems in TV Receivers

With the increasing number of programs being televised, less and less time is available for broadcasting of test patterns. The Simpson Model 485 Crosshatch Generator furnishes the answer to this problem by providing a synchronized signal, modulated on the carrier frequencies of channels 2 through 6, which can be tuned and sent through the receiver under test. When the receiver has been properly adjusted, the signal will show equally spaced lines in vertical, horizontal, or crosshatch patterns on the picture tube. All patterns are locked in place with synchronizing pulses exactly the same as the sync pulses in transmitted wave-forms.

With the Model 485 Crosshatch Pattern Generator horizontal and vertical linearity, hold, height, width and drive adjustments may be made easily and quickly when transmitter test patterns are not available.

Model 485 is housed in a beautiful gray hammerloid finished case with heavy leather handle for greater portability.

MODEL 1000

For Fast Testing in Convenient Ohms Readings for Leakage and Shorts

The new Simpson Model 1000 will test *any* receiving tube including 9 pin miniatures and subminiatures with base arrangements in a line or circle. The Model 1000 tests an extremely important factor in the tube which is plate conductance. The dial indicates percentage of rated plate conductance which is closely related to mutual conductance since amplification factor remains constant throughout the life of the tube. Testing by the Simpson plate conductance method makes testing methods simpler . . . more positive . . . more accurate. These tests are made under conditions simulating actual use in radio, television, hearing aids and other electronic circuits.

Now, you can have reliable short tests because the Simpson 1000 quickly and conveniently shows you exact ohms values for interelement leakage and tube shorts.

Handy multi-position toggle switches help you make quick adjustments to proper voltages for bias, screen and plate supply. Each tube element is individually connected to the proper potential . . . insures against tube damage during testing.

Practical Simpson Snap-Out-Snap-In transparent plastic windows are provided over the fast action roll chart. They're instantly removed. You may add information on new tubes at any time. You'll like the easy-to-read type on the roll chart . . . eliminates squinting.

Simpson's roll chart service makes a new roll chart available each year and complimentary roll chart supplements are provided at regular intervals.

Every detail—no matter how small—has been engineered to meet your satisfaction. The fuse socket is on the front panel . . . dial cover is one piece unbreakable clear plastic.

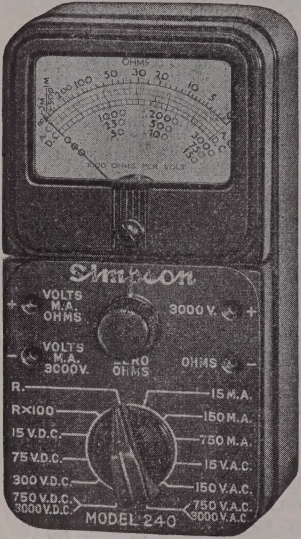
MODELS 240 and 230 VOLT-OHM-MILLIAMETERS



These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the special D'Arsonoval Simpson movement which is known for its extreme accuracy. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammeter" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3″ meters.

Ruggedly constructed for full load, continuous operation, the Simpson Model 390 is the first tester of its size ever made to give you volt, ampere and wattage readings in one compact instrument. It embraces two ranges each of voltage and current, providing four wattage ranges which cover practically all types and makes of appliances. The panel has volt-ampere combinations clearly indexed to the proper wattage range on the scale, which makes the instrument easy to use. All readings are shown on one meter. In normal position, the meter indicates volts. Ampere and watt readings are obtained by depressing button on the panel. The widely separated binding posts make it possible for the Model 390 to be used as an individual voltmeter or as an ammeter. The Model 390 has a molded bakelite case with all figures recessed in the panel, which are filled with white enamel for better legibility.

MODELS 391 and 392
AC-DC VOLT-WATTMETERS

Designed for simultaneous reading of volts and watts, each of these handy little testers has two separate 3" square meters, one for volts and one for watts. Each has a built-in cord and plug for connection to the line outlet, and a receptacle for connecting the appliance under test. The ranges for each meter are selected by separate toggle switches recessed in the molded bakelite case. The low power consumption combined with the high efficiency of these instruments results in negligible loss and error in reading.

MODEL 385 TEMPERATURE INDICATOR

This is the newest addition to the Simpson Appliance Tester line. You will find this a compact instrument which is ideal for measuring temperatures from +70° F to as low as —50° F, where fast accurate temperature readings are important. The scale is designed so that the center portion is expanded, making the most widely used temperatures easy to read. The Model 385 is ideal for use in the refrigeration service field and wherever temperature readings are important, such as deep freeze units, home refrigerators, walk-in coolers and air conditioning units. The temperature readings can be taken at the end of the 15' lead which is supplied with the unit. The lead cord is small in diameter, making it possible to close the door of the equipment, thus obtaining temperature indications under actual conditions.

The probe can also be immersed in liquids where critical temperatures must be maintained.

Range: −5° to +70° F.

NULL INDICATORS

Marion Ruggedized Hermetically Sealed Null Indicators are now available in models HS2 and HS3. They are used primarily as bridge and potentiometer balance indicators and in any application where an instrument with very high sensitivity about the zero or balance point is desired. The sensitivity at this point is 1 microampere per mm. or higher; the meter's shaded pole face and shielded core construction gives sharply logarithmic attenuation as it departs from null point, and provides ample overload protection. This Ruggedized meter opens up new applications for Null Indicators, for it permits use of the null system for precise measurement under field conditions that have been prohibitively severe up to now.

MARION MULTI-RANGE METER TESTER M-2

MARION
METER TESTER

Marion Meter Tester (Model M-2) is the only instrument of its type available today. A laboratory and production tool for the measurement of the performance of DC electrical indicating instruments, it combines in one portable package an electronically regulated self-contained power supply, stepless vacuum tube voltage control, large 8½" mirror-scale individually hand-calibrated illuminated standard instrument, a decade of .1% accurate manganin wire wound resistors, a resistance bridge, null indicator and associated switches.

The Marion Meter Tester measures current sensitivity of electrical indicating instruments in 10 steps from 25 ua full scale to 10MA full scale and from 0-100v. The resistance measurement portion of the meter tester permits measuring of the internal resistance of the meter under test without exceeding its full scale rating. Accurate measurement of the internal resistance of sensitive microammeters and other instrument types is possible over the range of 0-5000 ohms.

It may also be used as a precise production limit-bridge in the same resistance range and will permit acceptance tolerances to be set for any value from ±½ of 1% to ±20%.

The Marion Meter Tester is a means of high speed production inspection and calibration of electrical indicating instruments as well as a versatile laboratory instrument to assist in the maintenance of high measuring standards.

FEATURES

- Regulated Power Supply
- Stepless Vacuum Tube Voltage Control
- Illuminated 8½" Mirror-Scale Standard Instrument, Hand Calibrated
- Marion Ruggedized Null Indicator movement for bridge balance indication

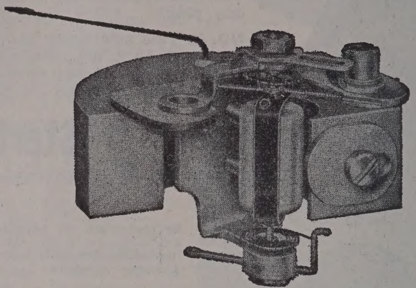
Alternating Current



Direct Current

AC and DC types are accurate to within 2% of full scale value at any point on the scale.

DC instruments combine extremely light weight moving elements and powerful alnico magnets to produce a torque to weight ratio which reduces frictional error to a minimum. This high torque to weight ratio permits use of pivots with ample pivot bearing surface to overcome effects of rough handling, shock, and vibration.

AC instruments are accurate over entire range of commercial power frequencies (25 to 125 cycles). These instruments are of repulsion vane type using carefully aged and impregnated field coils and multipliers which are wound with conductors of ample size so that temperature rise of the windings may be maintained at a minimum, even though instrument is subjected to continuous use in the circuit.

Alnico magnets are used to obtain perfected damping characteristics found in no other AC instrument.

Shurite

Model 550-DC with Zero Adjuster

Shurite panel meters are attractive, rugged, dependable instruments with accuracy well within 5%. All models have metal cases, telephone-black front; all require 2$\frac{5}{32}$" hole. DC meters are polarized-vane solenoid type, AC meters are double vane repulsion type with jeweled bearing. All are guaranteed.

● **Guarantee:** All Shurite meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 40c handling charge within one year after date of purchase.

● **All-metal Dials**—age and moisture resistant, lithographed in black on white for high visibility.

● **Sturdy Design**—with new coil frames for greater rigidity, yet interchangeable in other respects with similar type of instrument formerly available.

● **Modern appearance**—with concealed coils, full view scales, and attractive styling and finish.

TYPICAL USES: Shurite products, with their rugged design, and ability to duplicate readings, enjoy wide acceptance in the electronic and electrical fields. Applications include transmitters, receivers, TV antenna rotator controls, battery indicators, appliances, power sources, battery eliminators, electric fence controllers, and the very popular basic meters in radio test kits.

Shurite products are also specified for battery voltage indicators on emergency lighting, burglar and fire alarm systems, output meters on rectifiers (copper oxide, tungar or selenium types), rate-of-charge indicators, testers for hearing aid batteries and their chargers, ammeters for plating sets, and polarity indicators for metals analysis.

Other uses range from automotive test equipment to pin-ball circuit testers, and well depth indicators. Shurite has long been the favorite brand for those who take their hobbies and experiments seriously.

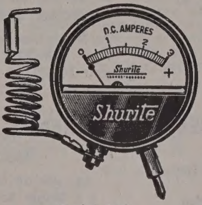
POCKET TYPE METERS

Various Shurite pocket meters using the Model 450 case are in production. Model 450 has bright plated case, with two or three terminals, depending on ranges. Ranges suitable for pre-war and post-war batteries, portable radio batteries and many other electrical applications, including polarity indication types have been made, although they are not regularly stocked.



Model 450

Stock numbers begin with 4 as the first digit. For example, the 0-3 DC Ammeter, as illustrated, is Stock No. 4202.

The bulletin, "Shurite Pocket Types", available on request, is periodically revised to indicate pocket meters which are authorized for production. Dealer net price is obtained by adding $0.40 to the price of 550 Model meters as shown in this catalog at $1.70 or less, or by adding $0.30 for meters at $1.75 or above.

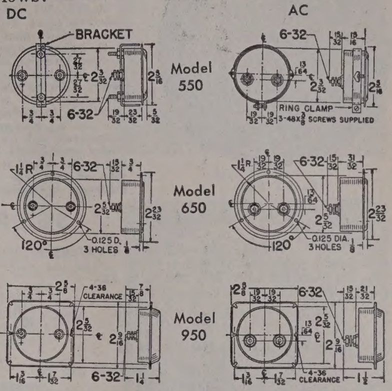
FLANGE ADAPTER RING

A sturdy flange ring to be placed over any Model 550 (round) Shurite meter where a flange mount is preferred. Makes appearance similar to Model 650. Wide flange, 2¾″ dia. Telephone black finish. Screws, lockwashers and nuts included.

Model 5-A, Net..**$0.18**

MOUNTING DETAILS

All Shurite Panel Meters have flush cases and require 2$\frac{5}{32}$″ hole. Most standard ranges have 6-32 studs, and are mounted as follows:



IMPORTANT—HOW TO ORDER:

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z)

Zero Adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on models using 950 case, except 9332-Z. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range—without zero adjuster is 5101. With zero adjuster, it is 5101-Z.

PANEL CALIBRATION (S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S. If thickness of steel panel is not specified, meter will be supplied for .040 panel.

VISCOSITY DAMPING (V)

Careful application of new silicone compound on bearing surfaces damps pointer overtravel. Add -V to stock number, as 5406-V, and 5 cents to price. Not regularly stocked; available only on quantity orders.

SEE YOUR DISTRIBUTOR

Besides carrying most types, and being able to obtain your other needs on reasonable notice, your authorized Shurite distributor of electronic parts is qualified to suggest the right meter for your need.

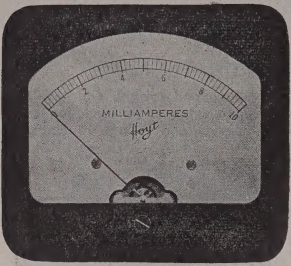
Hoyt PANEL AND PORTABLE INSTRUMENTS



MODEL Nos. 600 and 607

HOYT moving-coil Meters, both panel-mounting and portable, are built on the D'Arsonval principle. All with carefully selected jewel bearings and insulated zero adjustors. Accurate to 2% of full scale.

Alnico Magnets with soft-iron or sintered pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT designed "cross arm" spiral wire balance in two planes. High torque to weight ratio. Quick response and good damping under all conditions. Either "knife-edge" or "lance" type pointers available on most models.

Small Meters (2½″ to 4½″) have external pivot construction — best for sensitive movements in small instruments. Larger Meters have internal pivots. A wide range of sizes in round and square cases.

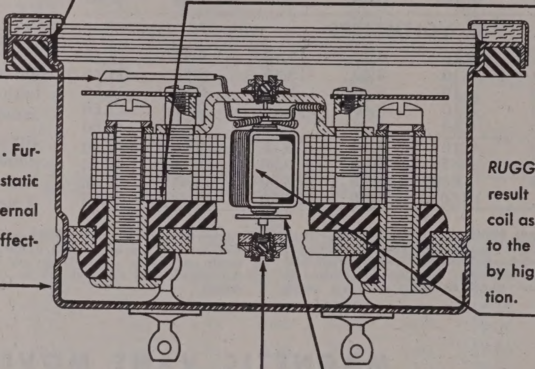
POINTERS . . . are formed of 52 SH aluminum alloy tubing locked to the balance cross of the moving coil system. This permits extreme overload, shock and vibration without damage.

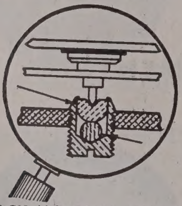
GLASS-TO-METAL HERMETICALLY SEALED . . . The glass window is metalized, tinned and soldered to the case. The electrical connections are glass sealed terminals.

SELF CONTAINED RUBBER SHOCK MOUNTS . . . control deflection of the instrument movement under shock. The specially developed rubber has good low temperature characteristics and high dielectric strength. It exhibits no corrosive properties even when exposed to extreme temperatures.



INSTRUMENT HOUSING . . . Furnishes magnetic and electrostatic shielding which prevents external magnetic conditions from affecting the meter calibration.

RUGGEDIZED MOVEMENT . . . is a result of a miniaturized moving coil assembly, the mass is reduced to the point that it is not affected by high shock, tumbling or vibration.



HAIRSPRINGS . . . for Phaostron *RUGGEDIZED* meters are formed of silver-coated beryllium copper springs of the shortest length consistent with the torque desired and are unaffected by high shock, vibration and impact.

SHOCK MOUNTED JEWELS AND PIVOTS . . . Large radius pivots reduce the unit loading and are incorporated with shock mounted jewels, assuring continuous accuracy when exposed to extreme shock and vibrational environment.

NEW TELEVISION VIDEO GENERATOR

Model 650

Price: $310.90

This fine new instrument is the first of its kind. Now available to rapidly and accurately solve your service problems. Does in minutes many of the TV servicing jobs that would require hours by other methods.

The 650 has a new timer circuit which delivers video pulses of 60 cycles, 900 cycles, 15,750 cycles and 315 kc., singularly or in any combination, both positive and negative output. Pulses are all locked together and crystal controlled for greater accuracy.

Pulses can be used directly, metered in peak-to-peak volts or to modulate the self-contained RF oscillator.

RF oscillator covers all TV channels in two bands (2-6 and 7-13), all on fundamentals. RF output is metered at all times from 1 to 10,000 microvolts with calibrated attenuation and variable percentage modulation. RF can be externally modulated with video frequencies from 5 cycles to 4 MC with variable percentage modulation on all channels.

Self-contained, substitute external video amplifier, 5 cycles to 4 MC with a variable gain from 0 to 10, with high input impedance, low output impedance and metered peak-to-peak voltage output.

Includes horizontal and vertical sawtooth voltages which can be directly substituted for vertical and horizontal oscillator in a TV receiver. Both the vertical and horizontal sawtooth amplitude is sufficient to give full raster deflection and in the case of flyback type high voltage power supplies the horizontal sawtooth can be used to light up the picture tube.

The 650 also contains an AC line voltage scale for instantaneous check on line voltage fluctuation, a common source of TV trouble.

This HICKOK Videometer is truly an all-purpose video generator, and a must for the income-minded, successful and aggressive TV service technician.

Will rebroadcast a TV picture on any channel, to any number of TV receivers.

Many TV receivers are so far out of alignment that extreme 'Scope sensitivity is necessary to properly show the response curve. The 670 provides this extra sensitivity — to 10 MV per inch.

To properly view all TV frequencies a wide band vertical amplifier is necessary. The 670 provides for this need by having a band width useable to beyond 5 MC. Push-pull amplifiers and polarity reversing switches are also new features you will find most useful in the 670.

TECHNICAL FEATURES:

Highest practical sensitivity: 0.01 (10 millivolts) RMS per inch.

Demodulator circuit for viewing modulation on RF signal.

Recurrent linear sweep; 3 cycles to 50,000 cycles.

Reversing switches for both horizontal and vertical deflection.

Fixed sweep frequency for horizontal and vertical wave forms to TV receivers.

Both negative and positive synchronizing.

Line phasing control (approximately 180°).

Wide band vertical amplifier, useful beyond 5 MC.

Direct coupled, balanced (push-pull) amplifiers for both vertical and horizontal deflection.

Provision for Z-axis modulation.

Permits the study and analysis of wave forms, and other electric and magnetic phenomena. Excellent square wave response.

Provides for the visual testing and alignment of amplitude and frequency modulated receivers, as well as television equipment when used with a frequency modulated RF oscillator or sweep generator.

TELEVISION RF MARKER and Crystal Calibrator

A perfect companion for the HICKOK 610-A TV Alignment Generator to provide the most complete, overall TV alignment including UHF.

The 680 is designed to rapidly solve the growing TV front-end maintenance problems. Thousands of TV front-ends are failing daily due to age. The usual procedure of returning these units to the manufacturer for replacement has become increasingly difficult. Now, with the 680 you can build a big business on repairing TV front-ends yourself — to crystal accuracy. The 680 has directly calibrated channel, sound and picture frequencies accurate to .05%. Covers the ranges of 53-89 MC and 174-217 MC on fundamentals and to 868 MC on harmonics.

The 680 also is a crystal standard with choice of 3 crystals provided by means of a front panel switch. (A 2.5 MC crystal is supplied.) The built-in magic eye provides a visible zero beat indicator; a phone jack is also provided for an audiable indicator.

The 680 can be used as a heterodyne frequency meter for calibrating other generators up to 900 MC.

This fine instrument is the latest HICKOK development and can be used as a crystal standard in the shop, laboratory or factory, to check oscillators, generators and front-end or over all response curve of a TV receiver to an accuracy of .05%.

Meters

For Accuracy and Dependability

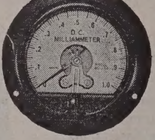
3½" ROUND-250 DEGREE METER

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.



2½" 250 DEGREE AIRCRAFT METER

This instrument is mounted in a regulation aircraft case per Army-Navy specification, including the shielding and dimensional requirements. Has scale approximately 4⅜" long. Quick readability makes them desirable as flight instruments. Aircraft-type dail is available. Mechanism specially designed for aircraft service and will meet vibration-resistant requirements, etc.

Rear panel is built with new screw-type terminals to eliminate solder connections. Also available in 2½" and 4½"

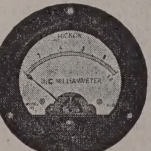
2½" MINIATURE PANEL MOUNTING, SEALED

This instrument answers the need for absolute airtight, panel sized electrical instruments for use in tropicalized military equipment, creameries, ships, outdoor, etc. Terminals are of the special glass soldered-in type using a direct bond of glass to metal. Case is rust proof black enamel. Exceptionally thick flint hard glass withstands pressure and shock tests designated by military specifications. Designed for flush mounting. Luminous dials can be supplied. Zero adjuster is internal. Also available in 3½".

MILLIAMMETER

3½" ROUND FLUSH MOUNTINGS

Accurate within 1½%. Large opening symmetrically designed admits a maximum of light to the dial. Thick flange eliminates danger of breakage and improves appearance. Metal dials with white background are supplied in all standard ranges. Special dial designs are supplied on quantity orders, at no extra charge. Include internal illumination.

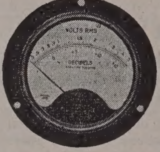


3½" SQUARE 250 DEGREE METER SAME AS THE ROUND 250 DEGREE METER

D.C. VOLTMETER

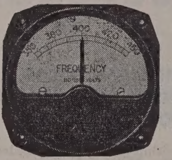
All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

4½" ROUND PANEL METER, SEALED



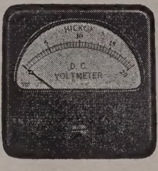
Latest design sealed instrument perfected for use wherever 4½" meters are required. Built around the famous Hickok internal pivot movement to provide lasting and dependable accuracy. Thoroughly engineered case design, features the perfect seal against air, dust, and moisture. Permanently sealed at the factory, however, special gasket construction permits opening and resealing with simple tools.

DIRECT READING FREQUENCY METER, AIRCRAFT TYPE



These Hickok improved self-contained frequency meters can be mounted in aircraft type cases of the large AN size. These are the smallest size frequency meters. This type of case is often convenient where space is a limiting factor. Suitable for aircraft use. Movement is shockproof. Case is dust and waterproof in accordance with Army-Navy aircraft instrument specifications. Radium or fluorescent dials and pointers available.

2½" MINIATURE SQUARE PANEL MOUNTING



Flush mounting, phenolic case, wide flange only; and metal cases, wide and narrow flanges. Accurate within 1½%. Series CR-30 CATHODE RAY TUBE TESTER

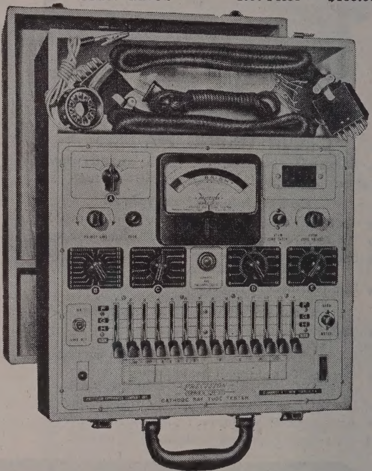
TESTS ALL TV PICTURE TUBES

(Magnetic and Electrostatic)

OSCILLOSCOPE AND INDUSTRIAL CATHODE RAY TYPES



SERIES CR-30 IS A COMPLETE, SELF-CONTAINED INSTRUMENT particularly engineered for the very special needs of reliable, rapid and economical cathode ray tube testing, in the field, shop or laboratory.

Series CR-30 is indispensible to the efficient TV Service-Installation Technician, TV Service Laboratory and wherever one is called upon to answer the performance question, "IS IT THE CATHODE RAY TUBE OR IS IT THE CHASSIS?"

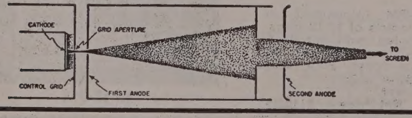
Series CR-30 incorporates a BEAM CURRENT TEST CIRCUIT which checks overall electron-gun performance for Proportionate Picture Brightness. Additional direct testing facilities are provided for positive check of accelerating anodes and deflection plate elements.

The Precision CR-30 should not be confused with mere adapters connecting to ordinary receiving tube testers which were never designed to meet the very specialized needs of CR tube checking. Similarly, it is not to be confused with neon lamp units or similar devices of limited technical merit and which do not check all CR tubes or all tube elements.

GENERAL AND TECHNICAL SPECIFICATIONS

- ★ **Tests All Modern Cathode Ray Tubes**—Magnetic and Electrostatic picture tubes, 'Scope Tubes and Industrial Types without removal from carton or TV chassis.
- ★ **Tests All CR Tube Elements**—Not just a limited few.
- ★ **Absolute Free-Point 14 Lever Element Selection System** for Short-Check, Leakage Testing and Quality Tests. Independent of multiple base pin and floating element terminations. Affords maximum anti-obsolescence insurance.
- ★ **Beam Current Test Circuit** checks all CR Tubes and Electron-gun in operation. It is the Electron Beam (and NOT total cathode emission) which traces the pictures or patterns on the face of the CR tube.

  Total cathode emission can be very high and yet Beam Current (and picture brightness) unacceptably low. **The CR-30 will reject such tubes** because it is a **Beam Current tester.** Conversely, total cathode emission can be low and yet Beam Current (and picture brightness) perfectly acceptable. **The CR-30 will properly pass such tubes** because it is a **Beam Current tester.** The significance of the above rests in the fact that Beam Current (and picture brightness) is primarily associated with the condition of the **center** of the cathode surface and not the overall cathode area. (See illustration below.)



- ★ **Voltage Regulated, Bridge Type VTVM** provides the heart of the super-sensitive, tube quality test circuit. Such high sensitivity is also required for positive check of very low current anodes and deflection plates.
- ★ **Multiple Test Sensitivities** plus selectable element test potentials permit proper accommodation of all CR tube types, Magnetic and Electrostatic.
- ★ **Micro-Line Voltage Adjustment,** which is **Meter-monitored** at filament supply, provides required close control of operating voltages.
- ★ **Accuracy** of test circuits closely maintained by use of factory adjusted internal calibrating controls; plastic insulated, telephone type cabled wiring; highest quality, conservatively rated components.
- ★ **Built-in, High Speed, Roller Tube Chart.**
- ★ **Test Circuits** Transformer isolated from power line.
- ★ **4⅝" Full Vision Meter** with special scale-plate expressly designed for CR tube testing requirements.
- ★ **Heavy Gauge Aluminum Panel,** etched and anodized.
- ★ **PLUS** many other **special "PRECISION"** details and features.

SERIES CR-30—In hardwood, tapered portable case, with hinged removable cover. Extra-Wide Tool and Test Cable Compartment. Overall Dimensions 17¼" x 13¾" x 6¾". Complete with standard picture tube cable, universal CR Tube Test Cable and detailed Instruction Manual.

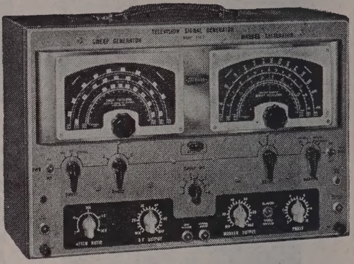
TELEVISION SIGNAL GENERATOR

No other instrument has ever equaled the Model TVG-2 for quality, desirable and necessary TV alignment features. Just read these brief specifications and make comparisons.



Model TVG-2

Sweep Oscillator: Three convenient ranges, 2 MC thru 38 MC; 38 MC thru 108 MC; 174 MC thru 216 MC are all on fundamentals. Continuous tuning over all ranges. Large accurately calibrated dial with the TV channels clearly indicated. Reversible direction of sweep.

Sweep Width: Provided by electro-mechanical sweep. Adjustable from .1 MC thru 18 MC in 7 steps for fast resetability. Provides that extra width for badly detuned circuits.

Marker Oscillator: Accurately calibrated dial gives complete marker coverage from 4 MC thru 216 MC with all the Television IF frequencies on highly stable fundamentals.

Crystal Oscillator: Separate crystal oscillator for use either as marker or calibrator. Stable circuit oscillates on any crystal fundamental from 4 MC to 20 MC. Output is controlled by selector switch to provide variable marker, crystal marker or both for calibration purposes. A BEAT DETECTOR is also incorporated for audible or visual checking of beat between variable marker oscillator and crystal.

400 Cycle Modulation: Provided for use with either the variable or crystal marker so traps can be adjusted by either audible or meter method.

Oscilloscope Timing: A phased 60 cycle sine wave timing voltage is provided with PHASE CONTROL to provide adjustment of double pattern. BLANKING is also available for single pattern trace with reference base line for measurement.

Video Modulation: Provision made for insertion of video signal to modulate the external marker output making possible "rebroadcasting" of television signals on any channel. Also an audio signal may be used to produce horizontal or vertical lines for linearity checks.

RF Output: Completely controllable with output control and step attenuator. Output impedance 30 ohms. Complete flexibility right at your finger tips.

Size: Same height as other Jackson TV instruments. Dimensions 13" high, 8¼" deep, 19⅛" wide.

Finish and Weight: An all steel gray Ham-R-Tex cabinet — total net weight 30 pounds.

Dealer Net Price....................$245.00

5-INCH OSCILLOSCOPE Model CRO-2

Wide Band Amplifier: Flat within 1.5 db from 20 cycles thru 4.5 megacycles dropping smoothly to a still useful value at 6 megacycles. This feature is absolutely essential for correct showing of TV sync. pulses.

Vertical Deflection Sensitivity: Two ranges with three positions for each range. Has fully compensated attenuators. Excellent transient response. Each unit completely tested for "tilt" and "overshoot."

Sensitivity Ranges: With a band width of 20 cycles thru 100 KC, the sensitivity ranges are .018, .18, 1.8 RMS volts per inch. The wide band position 20 cycles thru 4.5 MC has sensitivity ranges of .25, 2.5, 25 RMS volts per inch.

Horizontal Deflection Sensitivity: Push-pull horizontal amplifiers have a sensitivity for all applications of .55 RMS volts per inch.

Vertical Input Impedance: 1.5 megohms, shunted by 20 micromicrofarads. Direct to plates balanced 6 megohms, shunted by 11 micromicrofarads.

Horizontal Input Impedance: 1.1 megohms.

Linear Sweep Oscillator: Saw tooth wave 20 cycles thru 50 Kilocycles per second in 5 steps. Sine wave sweep of 60 cycles also available. Provision for external sweep synchronization.

Input Calibration: A standard voltage is provided for use in determining unknown voltages. Permits peak-to-peak measurement of all waveforms.

Vertical Polarity Reversal: By merely flipping a switch you can reverse the polarity of the voltage being supplied to the vertical deflection plates, also provides a means for choosing either positive or negative sync. voltages.

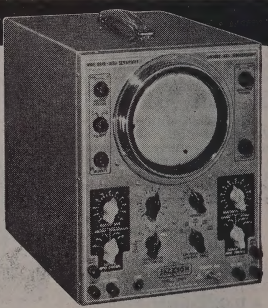
Return Trace Blanking: A new amplifier-timer combination for blanking return traces, providing a clearer, sharper image at all times. Prevents confusion in waveform analysis.

Synchronizing Input Control: Four input control positions, Internal — External — 60 cycle — 120 cycle.

Deflection Plate Connections: Direct connections thru capacitors for AC only to deflection plates of CR tube by means of terminal block at back of instrument.

Intensity Modulation: Either 60 cycle internal intensity modulation or external intensity modulation through binding posts on front panel.

Removable Calibration Screen: Clear plastic screen marked in grids of 1/10 inch per division. Easily removable.



Accessory: Demodulation probe available for using scope as signal tracing instrument.

Size: Same height as other Jackson TV instruments. Dimensions 13" high, 10¼" wide, 15⅛" deep.

Finish and Weight: An all steel gray Ham-R-Tex cabinet — total net weight 26 pounds.

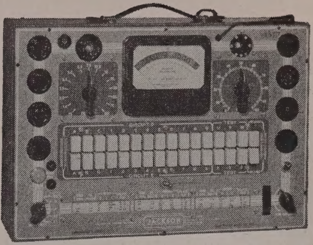
DYNAMIC TUBE TESTER

Model 648



This tester incorporates the most important engineering advancements in 12 years of tube tester research, such as the Dynamic test method and sequence switching. The Jackson Dynamic test circuit applies separate element voltages to each tube element. Separate load circuits are also used. These voltages and loads have been carefully selected for each tube to meet most ideally the normal operating condition of the tube. The current flowing only in the plate circuit of the tube under test is indicated on the 4 inch meter in easy-to-read terms.

Sequence Switching makes possible SIMPLIFIED OPERATION, formerly unattainable in Dynamic test methods. There are actually only three control units to be set according to rotary chart listing for each tube. These are: Heater Voltage (upper left), Plate Control (upper right) and the Sequence Switch (center). The only other adjustments are line voltage control and shorts test.

Fast, Accurate Shorts Test lamp indicates only when tube is shorted. The shorts test control moves only through 4 positions — yet completely tests each tube element for possible shorts or leakage. The tube is tested under a heated cathode condition.

Correct Test Voltage and Load Circuits protect tubes under test against damage by overload. Even low voltage battery types are provided with suitably low operating potentials. The full GOOD-BAD scale of the meter is used for each test. The meter is sufficiently sensitive that special "Low scale" readings are not required (such as for diodes, etc.).

Life-line test shows you accurate forecast of end of tube life. Reduced output caused by over-age gives reduced reading on meter. Lets you catch bad tubes before they actually go bad.

Steel cases and panels finished in gray Ham-R-Tex — approximate net weight of each model 16 pounds.

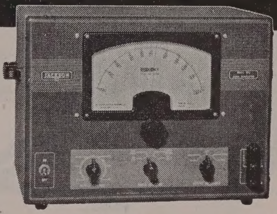
Model 648B (Bench-type steel case) $104.50

Model 648P (Portable Tester in wood case) $109.50

AUDIO OSCILLATOR Model 655



The model 655 provides an audio frequency voltage DEVELOPED AT ITS FUNDAMENTAL FREQUENCY. The basic design of this instrument is entirely different from the "beat frequency" type of Audio Oscillator.

FEATURES

Resistance Capacity Tuned Circuit Design, engineered for improved operating characteristics of audio measurements.

No Zero Adjustment — Tuned Fundamental Frequency method provides permanently locked calibration.

Output Characteristics — A choice of either transformer coupled or resistive output is available. The Model 655 meets the most exacting requirements as to **Waveform-Uniform Frequency Characteristics** and **Output Load Impedance Selection.** A special feature of the output system is the 10 ohm tap for low impedance circuits such as speaker voice coils, etc. **Variable Frequency Selection** throughout the four bands. There are over 33 inches of scale length making **Exact** settings possible.

Complete Stability — The stability of frequency calibration is constant throughout the entire range. The stabilized circuit permits large changes in line voltage to occur without affecting frequency or waveform and having negligible effect on output voltage.

Simplified Operation — It is only necessary to select desired **Frequency** and **Output. There Are No Other Controls** — The possibility of errors in operation is therefore eliminated.

High Output Power — More than **Three Times** the output usually available from ordinary audio oscillators.

Construction — Frequency dial is glass enclosed so that calibrations cannot become disfigured. Rugged mechanical features assure trouble free operation under service conditions.

SPECIFICATIONS

Frequency Range — 20 cycles to 200,000 cycles in 4 ranges: 20-200 cycles/200-2000 cycles/2000 to 20,000 cycles/20,000 cycles to 200,000 cycles.

Calibration — Logarithmic variation of frequency over the scale provides constant percentage accuracy at all frequencies.

Scale Length — Over 33 inches.

Output Impedance — Five values of output impedance: 10 ohms/250 ohms/500 ohms/5000 ohms/RESISTIVE. Controlled by selector switch.

Output Power — 500 Milliwatts (20 to 20,000 cycles transformer coupled).

Output Control — Continuously variable from zero to maximum.

Waveform — Less than 5% distortion at all frequencies between 30 and 15,000 cycles.

Frequency Characteristics — Plus or minus 1 DB 30-15,000 cycles using transformer coupled output.

Hum Level — Down more than 60 DB of maximum.

Accuracy — 3% or 1 cycle whichever is greater.

Tubes — 1-6G6G, 1-6SL7GT, 2-6V6GT, 1-5Y3GT furnished installed.

Dimensions — 13" wide x 9½" high x 9½" deep.

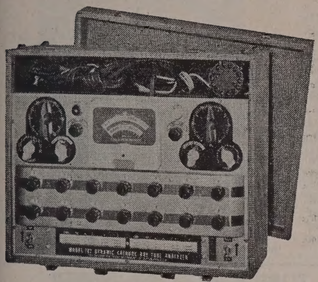
DYNAMIC® CATHODE RAY TUBE ANALYZER



This is the *only* CRT analyzer that completely and accurately tests *all* TV picture tubes, including both magnetic and electrostatic deflected types. It also tests oscilloscope, radar, and other special purpose CR tubes. No need to remove any tube from chassis or carton.

Model 707

SPECIFICATIONS

Beam Current: Test is made to the *final* anode — the only anode that really counts. The meter gives you an accurate forecast of tube life.

Grid Test: The beam current may be up to par; but, if the grid does not have the ability to cut off and control it, the tube is useless. Test voltage is ample for every type tube.

Gas Test: Certain amounts of gas in a CRT will render the tube inoperative. By checking the "gas current" to the FINAL anode, the presence of harmful gases is detected. High gas content indicates that the tube should be replaced as the life of the screen and/or cathode will be very limited.

Shorts Test: All elements are isolated for individual inter-element leakage tests. A circuit of high sensitivity is used to give indications of leakage on a neon lamp.

Roll Chart: Provided for rapid indication of proper selections.

Circuit Selector Switches: Placed on an escutcheon to make them easily accessible for every tube setup and to limit test setting confusion.

Test Voltages: Both high and low voltage power supplies are provided for the various test requirements of a cathode ray tube.

VTVM: The analyzer is designed around a highly sensitive, balanced bridge type VTVM. A continuously variable line voltage adjustment is provided to insure accurate readings.

Meter: An easy-to-read, full vision meter, designed especially for the CRT Analyzer, includes a line voltage adjust point, a "beam current" range, a "gas current" range, and a reference scale.

Case: The durable wooden airplane luggage covered carrying case is provided with ample space for storing the cable and adaptors.

Finish and Weight: Gray Ham-R Tex panel; ivory meter case. Net weight, 22 lbs.; shipping weight, 25½ lbs.

J-B-T INSTRUMENTS, INC.

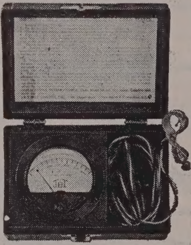
APPLIANCE TEMPERATURE TESTERS

A NEW IDEA IN TESTERS — The need for scientific but sturdy portable test equipment in the appliance service field is met by this exclusive line. Here the user profits from J-B-T's wide experience in building field test sets for many well-known manufacturers of ranges, irons, refrigerators, deep freeze units, and similar equipment. All J-B-T testers include the principle of remote reading of temperature,—and temperature measures the real usefulness of the appliance. Although called appliance testers, these handy portable testers have found a multitude of uses for trouble-shooting, experimenting and research in industry and in laboratories.

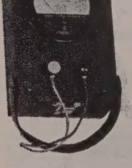
OVEN TESTERS

NEW

MODEL 23-JP-1. Latest addition to the widely-known family of J-B-T oven temperature testers is this modern and compact unit. Like the Models 32-JP-3 and 32-JP-4 described below, this indicating portable pyrometer is designed to save time and furnish reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. The same size of dial, 0-650°F., with 2⅜" scale arc reading, is used but covered by an all-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2⅞" x 4¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperatures change inside the instrument itself, and gives foolproof direct readings. Supplied with attached SA-116 5½' calibrated thermocouple, clip, and convection shield.......**$23.50**

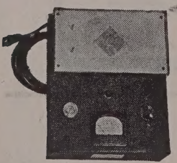


MODEL 32-JP-3. This sturdy, fast reading portable is by far the most widely used oven tester in the country. The rigid outer carrying case 6" x 3⅞" x 3¾" is covered in black leatherette; the glass-covered indicator fits in a 3¼" flanged metal case. The dial shows 0-650°F. in 10° divisions readable to 2½°. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is valuable feature whether the tester is used for service work, sales demonstrations, or inspection. More details on the 32-JP-3 are available in Bulletin JP-103. Price includes attached SA-116 5½' calibrated thermocouple, clip for attaching to grill, and convection shield for steady readings. **$25.05**



MODEL 32-JP-4. Companion tester to the 32-JP-3 with all the features of that tester, plus a leather carrying strap, and binding posts for quick attachment and interchanging of various thermocouples listed on this page, to check irons, washers, waffle-bakers, toasters, roasters, clothes dryers, etc. Range, 0-650°F; black leatherette case 6" x 3⅞" x 3¾". More details on the 32-JP-4 are available in Bulletin JP-104. Price includes SA-116 5½' calibrated thermocouple, clip and convection shield. **$26.15**

IRON TESTER



MODEL 32-JIT. Self-contained bench type tester; checks all makes of irons; measures thermostat temperatures; and shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5½", scale 0—650°F, 15 amp. fuse, 6' cord, 110-volt, 50-60 cycles.......**$31.65**

Note: Orders for 32-JIT Iron Testers are occasionally filled with 23-JIT Iron Testers. Identical with 32-JIT illustrated, but using indicators with all-plastic front.

ALL-PURPOSE TESTER

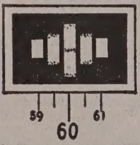
VIBRATING REED FREQUENCY METERS (PATENTED)

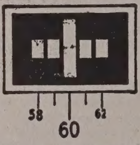
J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment. More than ten years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

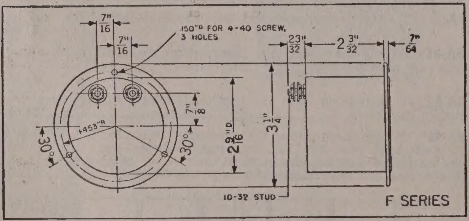
The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. The instrument consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

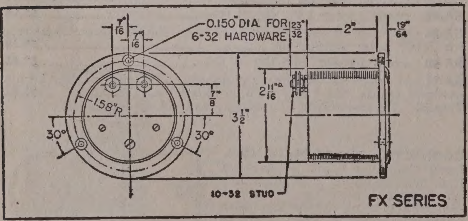






Above: Models 30-F, 31-F, 33-F, 34-F; 3¼" Metal Case

Below: Models 30-FX, 31-FX, 33-FX, and 34-FX; Molded Case Meets Mounting Dimensions of JAN-I-6; ASAC39.1-1951; and MIL-M-6A (Type MR35)



ADVANTAGES: Guaranteed accuracy at reference temperature of 77°F is ±0.3% or better of the frequency being measured, unless otherwise stated. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Accuracy is not affected by wave form or external magnetic fields. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

CAUTION: If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of the Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standard frequency signals.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

FHXX TYPE METERS, sealed instrument, glass-to-metal construction, with solder terminals and detachable flange now supersede the FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested for 55,000 ft. altitude. While not regularly stocked, these meters are in production.

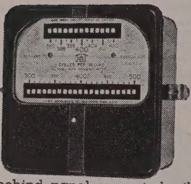
ELAPSED TIME METERS AND NEW FREQUENCY METERS

Now 400-cycle Total Time Meters — 400-cycle Broad and Vernier Indicator



MODEL 41-FX. This 2-window instrument is extensively used for electronic and aircraft testing in commercial and military applications. The lower window shows a broad range of 300-500 cycles, with 21 reeds in 10-cycle steps. The upper window gives a vernier effect with 13 reeds indicating 380-420 cycles in 4-cycle steps, with 2-cycle increments in the critical range of 396-404 cycles. Housed in black molded case with flush front 4" x 4", and 2 29/32" deep behind panel over studs, the instrument blends well with other types of panel meters. Made for 100-130 volt operation. Also available with 4 studs for 200-240, 115, and 30 volts as used in aircraft analyzers. Full dimensions on drawing SK-38.

ELAPSED TIME METERS—60 Cycles

MODEL 31-EX. To record operating time of AC electrical and electronic equipment, this self-starting instrument registers in 1/10th hour steps to 9,999.9 hours, then automatically re-sets. Shows tenths in red numerals, all others in black. Black molded case per diagram below matches FX, 3½" frequency meters, and fully encloses all parts. J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc.

31-EX, 60 cy., 110-125 volts	$15.95
31-EX, 60 cy., 230 volt (not regularly stocked)	$17.05
MODEL 31-ES. Same as 31-EX except black molded, square case 3" x 3", per print SK-34; 60 cy., 110-125 volts (not regularly stocked)	$17.05

SEALED ELAPSED TIME METER—60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals meet or exceed 3,000 volt breakdown test. Every instrument is inspected in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters per drawing on preceding page. See print SK-53 for complete mounting data. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically re-sets. Tenths indicator is in red, all others in black.

31-EHXX, 60 cy., 110-125 volts	$19.75

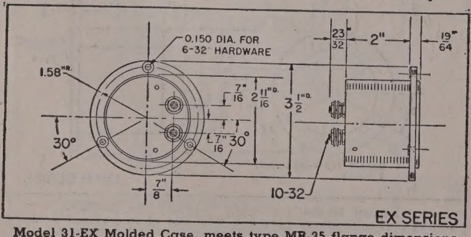
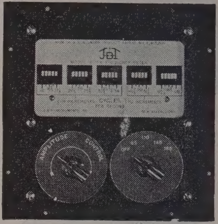
SEALED ELAPSED TIME METER—400 Cycles

MODEL 33-EHXX. The answer to the long-felt need for a stable 400-cycle elapsed time meter compact enough to fit in a 3½" flanged case, with all parts enclosed, is this new 400-cycle elapsed time meter. The instrument initially is being produced only in sealed construction, glass-to-metal, with separable flange, solder terminals, and flat glass front. External appearance matches FHXX series and Model 31-EHXX sealed, 60-cycle, elapsed time meter. A slightly larger case is used per drawing in the next column.

33-EHXX, 400 cy., 0-9,999.9 hours in 1/10 hour steps, 110-125 volts. **Price on Request**



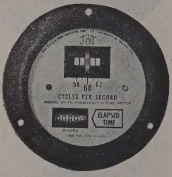
Model 31-EX Molded Case, meets type MR-35 flange dimensions of MIL-M-6A, also JAN-I-6 and ASA C39.1-1951



MODEL 61-FX. Telephone ringing circuits are among the frequencies checked regularly with this panel mounting, 25-reed, 5-window instrument. The first three bands cover 16 to 17-1/3 cycles, 24-1/3 to 25-2/3 cycles, and 32-2/3 to 34 cycles in 1/3 cycle steps. The last two bands show 48-2/3 to 51-1/3 cycles, and 65-1/3 to 68 cycles, with 2/3 cycle reeds. The selector switch provides taps for 85, 110, 145 and 165 volts. An amplitude control knob facilitates maximum reed vibration. Black bakelite front 6⅞" x 7⅛" x 3-1/16" deep behind panel. This instrument is typical of the specialized applications in panel and portable meters which J-B-T engineering and production know-how supply on special order.

61-FX (not regularly stocked), mounting to Print MD-37	$149.50

ELAPSED TIME AND FREQUENCY METERS



31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting same as model 31-F. Other dimensions per drawing below. For variations having 7, 9, or 11 reeds, not regularly stocked. See revised print SK-45.

31-FE, 3¼" metal case	$33.00

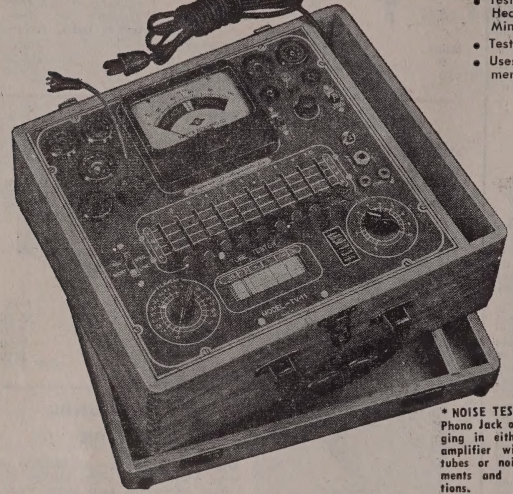
SUPERIOR TEST EQUIPMENT

The New Model TV-11 TUBE TESTER



Specifications:

- Tests all tubes including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing-aid, Thyratron, Miniatures, Sub-Miniatures, Novals, Sub-Minars, Proximity Fuse Types, etc.
- Tests for "shorts" and "leakages" up to 5 Megohms.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- Free-moving built-in roll chart provides complete data for all tubes.
- Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.

EXTRA SERVICE
The Model TV-11 may be used as an extremely sensitive Condenser Leakage Checker. A relaxation type oscillator incorporated in this model will detect leakage even when the frequency is one per minute.

*** NOISE TEST**
Phono Jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose external connections.

The Model TV-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover. Size 11½" x13"x6". Shipping Weight 15 lbs.

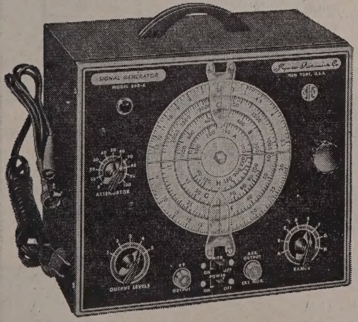
The new model 660-A — A NEW AC OPERATED
SIGNAL GENERATOR



Provides Complete Coverage for A.M.-F.M. and TV Alignment

• Generates Radio Frequencies from 100 Kilocycles to 60 Megacycles on fundamentals and from 60 Megacycles to 220 Megacycles on powerful harmonics. • Accuracy and stability are assured by the use of permeability trimmed Hi-Q coils. • R. F. available separately or modulated by the internal audio oscillator. Built in 400 cycle sine wave audio oscillator used to modulate the R. F. signal also available separately for audio testing of receivers, amplifiers, hard of hearing aids, etc. • R. F. Oscillator Circuit: A high transconductance heptode is used as an R. F. Oscillator, mixer and amplifier. Modulation is effected by electron coupling in the mixer section thus isolating the oscillator from load changes and affording high stability. • A. F. Oscillator Circuit: A high transconductance heptode connected as a high-mu triode is used as an audio oscillator in a high-C Colpitts Circuit. The output (over 1 Volt) is nearly pure sine wave • Attenuator: A 5 step ladder type of attenuator is used.

Tubes used: 1—6BE6 as R. F. Oscillator, mixer and amplifier. 1—6BE6 as Audio Oscillator. 1—6H6 as Power Rectifier.

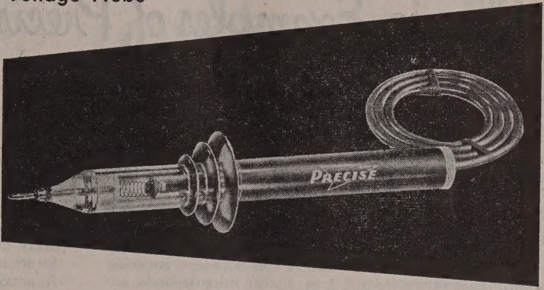
The PRECISE MODEL 999 High Voltage Probe was designed by high voltage measurements with special emphasis on SAFETY, OPERATIONAL SIMPLICITY AND RUGGED CONSTRUCTION. First in the industry to include any one or more of the following exclusive features:

MULTIPLE INSULATION: The only probe with at least three individual media that must be penetrated before a voltage breakdown could occur.

MECHANICALLY SHOCKPROOF CONSTRUCTION: The only probe to utilize a double spring suspension system in order to protect the Ceramic high wattage multiplier resistor.

INTERCHANGEABLE TIPS: The only probe where two tips are supplied — one, the conventional type for probing; the other, an alligator clip for connecting permanently to the circuit.



SWIVEL LEAD CONSTRUCTION: A special-fixed slip-ring arrangement is provided which prevents the test lead cable from snagging or developing high strains at the junction of the cable and probe handle.

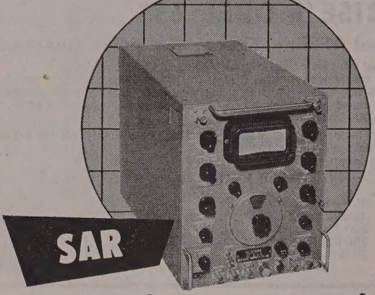
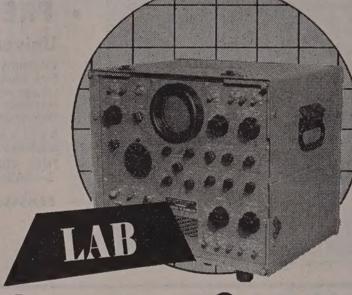
PULSESCOPE®

The Oscilloscope that portrays the Pulse by Waterman





Classic Examples of Precision Engineering...

Investigations of complex waves take great strides forward when either a Waterman SAR or LAB PULSESCOPE is employed. Their compactness, portability and precision have established a new high in pulse measurement instruments for all electronic work. Each PULSESCOPE has internally generated markers which are synchronized with the sweep with the basic difference that the sweep in the LAB PULSESCOPE initiates the markers while in the SAR PULSESCOPE it is the crystal controlled markers which initiate the sweep. Power supply requirements of 50 to 1000 c.p.s. at 115 Volts permits operation almost anywhere.

The SAR PULSESCOPE, model S-4-A, is characterized by a pulse rise time of 0.035 microseconds thru a video amplifier with a sensitivity of 0.5 Volts p to p/inch. A vertical delay of 0.55 microseconds is optional. A and S sweeps covering a continuous range from 1.2 to 12,000 microseconds are augmented by R sweeps, which in turn are variable from 2.4 to 24 microseconds. A directly calibrated dial permits R sweep delay readings from 3 to 10,000 microseconds.

The LAB PULSESCOPE, model S-5-A, has equivalent rise time of 0.035 microseconds, a fixed 0.55 microseconds vertical delay and 0.1 Volts p to p/inch sensitivity, so arranged as to assure portrayal of leading edges on displayed signals. A precision calibrated voltage is provided as well as an optional sweep expansion of 10 to 1. A built-in trigger generator voltage is available for synchronizing any associated test equipment.

WATERMAN RAYONIC® CATHODE RAY TUBE DEVELOPMENTS

Since the introduction of the Waterman RAYONIC 3MP1 for miniaturized oscilloscopes, scientists in our laboratories have diligently searched for more perfect answers to present day cathode ray tube problems. Such research led to the introduction of the revolutionary new 3SP and 3XP type cathode ray tubes. These tubes were designed with multi-trace oscilloscopy in mind. Every avenue of practical design was explored to produce tubes with bright, sharp traces and high deflection sensitivity at medium anode potentials.

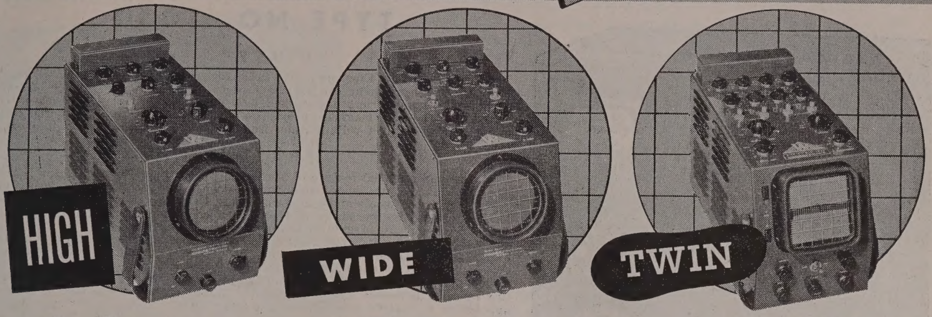
POCKETSCOPE®

The Pocket Oscilloscope by Waterman



...light...compact...accurate...portable

The HIGH, WIDE and TWIN POCKETSCOPES have become the "triple threat" of the oscilloscope industry. Their small size, light weight and incredible performance, has skyrocketed this team of truly portable instruments into unparalleled prominence. Each oscilloscope features DC coupled amplifiers in both its vertical and horizontal channels. The HIGH GAIN, S-14-A POCKETSCOPE, has a vertical sensitivity of 10 millivolts rms/inch, and a frequency response within −2 db from DC to 200 KC, while the WIDE BAND S-14-B POCKETSCOPE is characterized by frequency response within −2 db from DC to 700 KC and a sensitivity of 50 millivolts rms/inch.

The TWIN POCKETSCOPE is essentially two HIGH GAIN POCKETSCOPES with individual cathode ray tubes, amplifiers, controls, but a common sweep generator. All these are endowed with many identical characteristics. Their sweep generators can be operated as triggered or repetitive over a frequency range from 0.5 cycles to 50 KC, with synchronization polarity optional. Return traces are blanked and provisions are made for modulating the intensity in each cathode ray tube.

Laboratory quality has not been sacrificed in order to accomplish portability and ruggedness. Investigate the many advantages of Waterman POCKETSCOPES.

The INDUSTRIAL POCKETSCOPE, model S-11-A, has become America's most popular DC coupled oscilloscope because of its small size, light weight, and unique flexibility. This compact instrument has identical vertical and horizontal amplifiers which permit the observation of low frequency repetitive phenomena, while simultaneously eliminating undesirable trace bounce. Each amplifier sensitivity is 0.1 Volt rms/inch. The frequency responses are likewise identical, within −2 db from DC to 200 KC.

Discover for yourself the amazing utility of this tiny work-horse of industrial electronics.

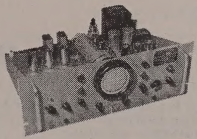
RAKSCOPE®



S-12-B

The S-12-B RAKSCOPE is a rack mounted, JANized version of the famous Waterman S-11-A POCKETSCOPE, with the addition of a triggered sweep and a special calibrating circuit for rapid frequency comparisons. The entire oscilloscope is built to occupy but seven inches when mounted in a standard relay rack.

Because provisions are made for applying input signals from the rear, as well as the front, the S-12-B is the ideal combination, systems monitor and trouble-shooting oscilloscope. Investigate the multiple applications of this instrument as an integral part of your own rack mounted apparatus.

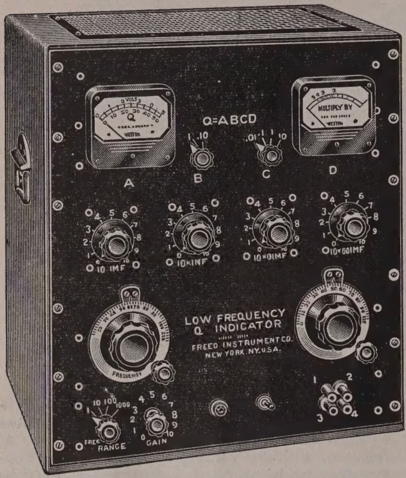
LOW FREQUENCY "Q" INDICATOR

TYPE NO. 1030



USES

The Type 1030 Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and supersonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The effective frequency range for "Q" measurements is 50 to 50,000 cycles. Due to the fact that the R. C. Oscillator frequency range is from 20 to 200,000 cycles, comparative "Q" Measurements can be made below 50 cycles and above 50,000 cycles. Since the "Q" factor appears as a relative quantity, i.e., a ratio of two voltages, the tracking of the two meters is such that a reasonably good accuracy of "Q" factors is obtained for frequencies above 50,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument and can therefore be used as a high quality precision variable condenser. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with a maximum output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 50. A high accuracy of measurement is obtained, since for any position of the multipliers, a total of "Q" variation from 0 to 50 is read on a 4 inch meter. "Q" factors of coils can be measured with up to 50 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils in function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

SPECIFICATIONS

Range of "Q" Measurements: The range of "Q" factors is from .5 to 500 over the frequency range from 50 to 50,000 cycles. The accuracy of "Q" measurement is approximately 5% for frequencies up to 50,000 cycles.

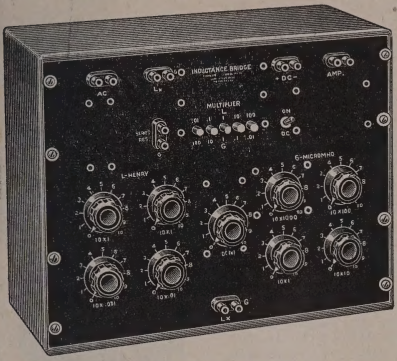
TYPE 1110-A INCREMENTAL INDUCTANCE BRIDGE



USES

The Incremental Inductance Bridge is designed for measuring the inductance of Iron Core components at any frequency up to 10,000 cycles. Inductors can be measured with a superimposed direct current, therefore, the bridge will measure the incremental inductance of coils. The bridge can be used for determination of storage factor, "Q", either at a given frequency in function of the applied voltage or at a given voltage in function of the applied frequency. The bridge can be used by the manufacturers of iron core components, such as filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

SPECIFICATIONS

Inductance Ranges: One millihenry to one thousand henries in five ranges. Inductance values are read directly from a four dial decade and a multiplier switch. The last range may be extended to 10,000 henries through the use of an external resistance.

Conductance Ranges: One micromho to one mho in five ranges, read directly from a four dial decade and a multiplier switch. This conductance represents the reciprocal of the A.C. resistance of the coil.

"Q" Range: "Q" is measured as the product of Inductance (L) and Conductance (G). The range of "Q" measured on the bridge is 0.5 to 100. Measurement of inductance is independent of the values of "Q".

Accuracy: 1% through the frequency range from 60-1000 cycles 2% for frequencies from 1000 to 10,000 cycles. This accuracy is decreased for extreme positions of the multiplier. Conductance measurements 5% from 60-1000 cycles.

Frequency Range: The bridge is calibrated and adjusted at both 60 and 1000 cycles, but can be used at any frequency up to 10,000 cycles. Errors resulting from stray capacity increase with frequency. Coils having a high inductance should be measured at a low frequency to avoid resonance effect.

Range of Superimposed D.C.: On multiplier switch position L X 100 the D.C. is limited to 10 ma.

On the position L X 10, the D.C. is limited to 250 ma.

On all other positions the D.C. can be one ampere maximum.

Mounting: The bridge is supplied in a walnut cabinet or on special order for standard rack mounting.

By using decade resistors in the variable arms the unknown can be measured to four significant figures.

Operation is simple and both terminals and controls are arranged for convenience and ease of measurements.

SPECIFICATIONS

Frequency Range: The bridge can be used at frequencies from 20 cycles to 20,000 cycles.

Accuracy: All resistors of the bridge arms are adjusted to 0.1%. The absolute accuracy of measurement will depend upon the accuracy of standards used.
